Russ, J. Christian Russ, 2017-12-19 Image processing comprises a broad variety of methods that operate on images to produce another image. A unique textbook, *Introduction to Image Processing and Analysis*, establishes the programming involved in image processing and analysis by utilizing skills in C compiler and both Windows and MacOS programming environments. The provided mathematical background illustrates the workings of algorithms and emphasizes the practical reasons for using certain methods, their effects on images, and their appropriate applications. The text concentrates on image processing and measurement and details the implementation of many of the most widely used and most important image processing and analysis algorithms. Homework problems are included in every chapter, with solutions available for download from the CRC Press website. The chapters work together to combine image processing with image analysis. The book begins with an explanation of familiar pixel array and goes on to describe the use of frequency space. Chapters 1 and 2 deal with the algorithms used in processing steps that are usually accomplished by a combination of measurement and processing operations as described in chapters 3 and 4. The authors present each concept using a mixture of three mutually supportive tools: a description of the procedure with example images, the relevant mathematical equations behind each concept, and the simple source code in C, which illustrates basic operations. In particular, the source code provides a starting point to develop further modifications. Written by John Russ, author of the esteemed *Image Processing Handbook* now in its fifth edition, this book demonstrates functions to improve an image's features and detail, visibility, improve images for printing or transmission, and facilitate subsequent analysis.

Video Surveillance Techniques and Technologies Zeljkovic, Vesna, 2013-12-31 This book presents empirical research and acquired experience on the original solutions and mathematical algorithms for motion detection and object identification problems, emphasizing a wide variety of applications of security systems. Provided by publisher. *Handbook of Research on Machine Learning Innovations and Trends* Hassanien, Aboul Ella, Gaber,

Tarek, 2017-04-03 Continuous improvements in technological applications have allowed more opportunities to develop automated systems. This not only leads to higher success in smart data analysis but it increases the overall probability of technological progression. *The Handbook of Research on Machine Learning Innovations and Trends* is a key resource on the latest advances and research regarding the vast range of advanced systems and applications involved in machine intelligence.

Highlighting multidisciplinary studies on decision theory intelligent search and multi agent systems this publication is an ideal reference source for professionals and researchers working in the field of machine learning and its applications
