Quality Function Deployment for Buildable and Sustainable Construction Singhaputtangkul Natee, Sui Pheng Low, Evelyn A. L. Teo, 2015-10-16 This book focuses on the implementation of Quality Function Deployment QFD in the construction industry as a tool to help building designers arrive at optimal decisions for external envelope systems with sustainable and buildable design goals In particular the book integrates special features into the conventional QFD tool to enhance its performance These features include a fuzzy multi criteria decision making method fuzzy consensus scheme and Knowledge Management System KMS This integration results in a more robust decision support tool known as the Knowledge based Decision Support System QFD KBDSS QFD tool As an example the KBDSS QFD tool is used for the assessment of building envelope materials and designs for high rise residential buildings in Singapore in the early design stage The book provides the reader with a conceptual framework for understanding the development of the KBDSS QFD tool The framework is presented in a generalized form in order to benefit building professionals decision makers analysts academics and researchers who can use the findings as guiding principles to achieve optimal solutions and boost efficiency Curtain Walls Michael J. Crosbie, 2005 20 exemplary facades by Cesar Pelli Associates are presented in this book arranged by material glass metal stone The conception and development of each individual facade solution is unfolded and construction details comprehensively documented in numerous drawings **Curtain Wall Systems** Ali M. Memari, 2013 Exterior Wall Systems Barry Donaldson, 1991 Provides the building industry architects engineers manufacturers and contractors with information and solutions based on actual building projects Fourteen papers cover design concerns of exterior wall systems testing and analysis structural sealant glazing stone selection and precast and **An Introduction to the Design of Curtain Walls, Aluminum Windows, Glass Walls, Skylights and Canopies** Yong Sheng Zhou, 2002 **Curtain Walls** Rolf Schaal, 1962 *Building Envelope Design Using Metal and Glass Curtain Wall Systems* Quirouette, R. Division of Building Research, 1982 *Advanced Connection Systems for Architectural Glazing* Roham Afghani Khoraskani, 2015-03-02 This book presents the findings of a detailed study to explore the behavior of architectural glazing systems during and after an earthquake and to develop design proposals that will mitigate or even eliminate the damage inflicted on these systems The seismic behavior of common types of architectural glazing systems are investigated and causes of damage to each system identified Furthermore depending on the geometrical and structural characteristics the ultimate horizontal load capacity of glass curtain wall systems is defined based on the stability of the glass components Detailed attention is devoted to the incorporation of advanced connection devices between the structure of the building and the building envelope system in order to minimize the damage to glazed components An innovative new connection device is introduced that results in a delicate and functional system easily incorporated into different architectural glazing systems including those demanding maximum transparency **Glass and Metal Curtain Walls**

The Contemporary Curtain Wall: Its Design, Fabrication, and Erection William Dudley Hunt, 1958

Deflection Gap Study for Cold-formed Steel Curtain Wall Systems Barbara L. Monroy, 2009 Cold formed steel has become a preferred building material for wall framing in many different types of structures One of its main uses has been as non structural members in curtain wall assemblies of structural steel framed buildings In an exterior wall application the main purpose of the curtain wall is to transfer out of plane loads to the steel frame while not supporting any superimposed gravity loads Therefore when the curtain wall is in the plane of the structural steel frame the vertical deflection of the spandrel beam directly above the wall must be known to provide the appropriate deflection gap between the beam and the curtain wall so that gravity loads are not transferred to the wall Common practice is to size the gap for the deflection from 100% of the live load In some cases the deflection gap may be significant and since this gap must also be provided in the exterior cladding of the wall it creates a design issue for the architect This report presents the results of an investigation into the feasibility of reducing the size of the deflection gap when the wall is located directly under the spandrel beam In this study analytical models were developed for common design situations of curtain walls constructed of cold formed steel studs in structural steel framed buildings This study investigates two common stud heights combined with different floor live loads Taking into account that wall studs have some available axial compressive strength a procedure was developed to determine an appropriate reduction for the gap Using an iterative process a relationship is made between the axial compressive strength of the stud and the amount of axial load the stud can support to establish a factor which gives the percentage the live load gap for 100% live load can be safely reduced by

The Marriage of Glass and Stone CO.

Peterson, D.S. Smith, 1988 This article reviews two of the many curtain wall systems available to clad the exterior of medium to high rise buildings with glass and stone the vertical stopless system and the unitized curtain wall system These glazing methods utilize aluminum as the structural backbone and glass and stone as glazed panels The systems major details are individually analyzed and general recommendations on key areas are made along with a discussion of preliminary design criteria for stone and glass curtain walls Finally advantages of both systems are highlighted **Curtain Wall Construction** Konrad Gatz, 1967 **Curtain Wall Connections to Steel Frames** R. G. Ogden, 1992 **Curtain Wall Design Manual** United States Gypsum Co, 1977* **Science and Technology of Glazing Systems** Charles J. Parise, 1990 High Performance Curtain Wall Mullion Section Design with Various Densities of Gyroid Min Jeong Kang (M. Eng.), 2016 The thermal bridge problem in building facades has become a topic of interest as the energy performance of building enclosure design required improvements with a global lead in sustainable building design Curtain wall facade systems are widely used for recent high rise buildings and the thermal bridge issue occurs mainly within the aluminum frame of the curtain wall system In addition to the thermal bridging effects the conventional curtain wall facade designs have limitations in increasing the stiffness of the mullion As to address the lack of an innovative solution to solve both issues this thesis proposes utilizing a cellular structure in mullion design In particular this thesis has selected a single gyroid structure which is an open cell foam structure that has the minimum surface area necessary to span a region of space The thesis explores various aspects of the application that extend from a rapid modeling method of gyroid structure experiments and simulations along with theoretical values for mechanical and thermal properties of gyroid to topology optimization of the various densities of gyroid in the composite structure The results are expected to improve the curtain wall designs with future experimental verifications
