Intelligente Produktions- und

Fertigungsoptimierung - Der Bienenalgorithmus-Ansatz Duc Truong Pham, Natalia Hartono, 2024-12-02. Dieses Buch ist das erste Werk, das sich mit dem Bienenalgorithmus beschäftigt. Nach einer sanften Einführung in die wichtigsten Ideen, die dem Algorithmus zugrunde liegen, stellt das Buch aktuelle Ergebnisse und Entwicklungen im Zusammenhang mit dem Algorithmus und seiner Anwendung auf Optimierungsprobleme in Produktion und Fertigung vor. Mit dem Beginn der vierten industriellen Revolution sind Produktions- und Fertigungsprozesse und -systeme immer komplexer geworden. Um die beste Leistung aus ihnen herauszuholen, sind effiziente und effektive Optimierungstechniken erforderlich, die nicht von der Verfügbarkeit von Prozess- oder Systemmodellen abhängen. Solche Modelle sind in der Regel entweder nicht verfügbar oder aufgrund des hohen Grades an Nichtlinearität und Unsicherheiten in den darzustellenden Prozessen und Systemen mathematisch schwer zu lösen. Der Bienenalgorithmus ist eine leistungsstarke schwarmbasierte intelligente Optimierungsmetaheuristik, die vom Suchverhalten der Honigbienen inspiriert ist. Der Algorithmus ist konzeptionell elegant und extrem einfach anzuwenden. Alles, was er zur Lösung eines Optimierungsproblems benötigt, ist ein Mittel zur Bewertung der Qualität potenzieller Lösungen. Dieses Buch zeigt die Einfachheit, Effektivität und Vielseitigkeit des Algorithmus und ermutigt Ingenieure und Forscher auf der ganzen Welt, ihn weiter einzusetzen, um eine intelligente und nachhaltige Fertigung und Produktion im Zeitalter von Industrie 4.0 und darüber hinaus zu realisieren.

Supply Chain Configuration

Charu Chandra, Janis Grabis, 2016-03-18. This book discusses the models and tools available for solving configuration problems, emphasizes the value of model integration to obtain comprehensive and robust configuration decisions, proposes solutions for supply chain configuration in the presence of stochastic and dynamic factors, and illustrates application of the techniques discussed in applied studies. It is divided into four parts which are devoted to defining the supply chain configuration problem and identifying key issues, describing solutions to various problems identified, proposing technologies for enabling supply chain confirmations, and discussing applied supply chain configuration problems. Its distinguishing features are an explicit

focus on the configuration problem and in depth coverage of configuration models and emphasis on model integration and application of information modeling techniques in decision making. New to this edition is Part II Technologies which introduces readers to various technologies being utilized for supply chain configuration and contains two new chapters. The volume also has an added emphasis on the most recent theoretical developments and empirical findings in the area of supply chain management and related topics. This book is appropriate for professional and technical readers including research directors, research associates and institutions involved in both the design and implementation of logistics systems in manufacturing and service related products. An equally appropriate audience is the academic reader including professors, research associates and students in industrial manufacturing, mechanical and automotive engineering departments as well as engineering management, management sciences and production and operations management.
