Hussain,Amin Z. Sadik,Peter O'Shea,2011-02-17 In three parts this book contributes to the advancement of engineering education and that serves as a general reference on digital signal processing Part I presents the basics of analog and digital signals and systems in the time and frequency domain It covers the core topics convolution transforms filters and random signal analysis It also treats important applications including signal detection in noise radar range estimation for airborne targets binary communication systems channel estimation banking and financial applications and audio effects production Part II considers selected signal processing systems and techniques Core topics covered are the Hilbert transformer binary signal transmission phase locked loops sigma delta modulation noise shaping quantization adaptive filters and non stationary signal analysis Part III presents some selected advanced DSP topics *An Introduction to Digital Signal Processing* Stanley Mneney,2022-09-01 An Introduction to Digital Signal Processing aims at undergraduate students who have basic knowledge in C programming Circuit Theory Systems and Simulations and Spectral Analysis The book is focused on basic concepts of digital signal processing MATLAB simulation and implementation on selected DSP hardware in which the candidate is introduced to the basic concepts first before embarking to the practical part which comes in the later chapters Initially Digital Signal

Processing evolved as a postgraduate course which slowly filtered into the undergraduate curriculum as a simplified version of the latter. The goal was to study DSP concepts and to provide a foundation for further research where new and more efficient concepts and algorithms can be developed. Though this was very useful, it did not arm the student with all the necessary tools that many industries using DSP technology would require to develop applications. This book is an attempt to bridge the gap. It is focused on basic concepts of digital signal processing, MATLAB simulation and implementation on selected DSP hardware. The objective is to win the student to use a variety of development tools to develop applications.
