

14. Name the S.I. unit of force and define it.

Solution:

The S.I unit of force is newton.

One newton is the force which when acts on a body of mass 1kg, produces an acceleration of 1m/s^2 , i.e., $1\text{ newton} = 1\text{ kg} \times 1\text{m/s}^2$

15. What is the C.G.S unit of force? How is it defined?

Solution:

The C.G.S unit of force is dyne. One dyne is the force which when acts on a body of mass 1g, produces an acceleration of 1cm/s^2 , i.e., $1\text{ dyne} = 1\text{g} \times 1\text{cm/s}^2$

16. Name the S.I. and C.G.S units of force. How are they related?

Solution:

S.I. unit of force is newton, C.G.S. unit of force is dyne.

Relationship between newton and dyne:

$$\begin{aligned} 1\text{ newton} &= 1\text{ kg} \times 1\text{m/s}^2 \\ &= 1000\text{g} \times 100\text{cm/s}^2 = 10^5\text{ g} \times \text{cm/s}^2 \\ &= 10^5\text{ dyne} \end{aligned}$$

17. Why does a glass vessel break when it falls on a hard floor, but it does not break when it falls on a carpet?

Solution:

The glass vessel comes to rest almost immediately when it falls from a height on a hard floor.

Hence the floor applies a huge force on the vessel causing it to break. But, if the glass vessel falls on a carpet, the time period at which the vessel comes to rest escalates hence the carpet applies lesser force in the vessel and hence it does not break.

Angle-Resolved Photoemission Spectroscopy Study of Spin Fluctuations in the Cuprate Superconductors Francisco Restrepo, 2022-09-13 This thesis makes significant advances towards an understanding of superconductivity in the cuprate family of unconventional high temperature superconductors Even though the high temperature superconductors were discovered over 35 years ago there is not yet a general consensus on an acceptable theory of superconductivity in these materials One of the early proposals suggested that collective magnetic excitations of the conduction electrons could lead them to form pairs which in turn condense to form the superconducting state at a critical temperature T_c Quantitative calculations of T_c using experimental data were however not available to verify the applicability of this magnetic mechanism In this thesis the author constructed an angle resolved photoemission apparatus that could provide sufficiently accurate data of the electronic excitation spectra of samples in the normal state data which was furthermore unusually devoid of any surface contamination The author also applied the Bethe Salpeter method to his uncommonly pristine and precise normal state data and was able to predict the approximate superconducting transition temperatures of different samples This rare combination of experiment with sophisticated theoretical calculations leads to the conclusion that antiferromagnetic correlations are a viable candidate for the pairing interaction in the cuprate

Passive Methods as a Solution for Improving Indoor Environments José A. Orosa, Armando C. Oliveira, 2012-02-02 There are many aspects to consider when evaluating or improving an indoor environment thermal comfort energy saving preservation of materials hygiene and health are all key aspects which can be improved by passive methods of environmental control Passive Methods as a Solution for Improving Indoor Environments endeavours to fill the lack of analysis in this area by using over ten years of research to illustrate the

effects of methods such as thermal inertia and permeable coverings for example the use of permeable coverings is a well known passive method but its effects and ways to improve indoor environments have been rarely analyzed Passive Methods as a Solution for Improving Indoor Environments includes both software simulations and laboratory and field studies Through these the main parameters that characterize the behavior of internal coverings are defined Furthermore a new procedure is explained in depth which can be used to identify the real expected effects of permeable coverings such as energy conservation and local thermal comfort as well as their working periods in controlling indoor environments This theoretical base is built on by considering future research work including patents and construction indications which will improve indoor environmental conditions with evidence from real data This makes Passive Methods as a Solution for Improving Indoor Environments an ideal resource for specialists and researchers focusing on indoor air quality thermal comfort and energy saving or with a general interest in controlling indoor environments with passive methods
