Physics Of The Future By Michio Kaku:

Physics of the Future Michio Kaku, 2011-05-05 The international bestselling author of Physics of the Impossible gives us a stunning and provocative vision of the future. Based on interviews with over three hundred of the world's top scientists who are already inventing the future in their labs, Kaku in a lucid and engaging fashion presents the revolutionary developments in medicine, computers, quantum physics, and space travel that will forever change our way of life and alter the course of civilization itself. His astonishing revelations include: The Internet will be in your contact lens. It will recognize people's faces, display their biographies, and even translate their words into subtitles. You will control computers and appliances via tiny sensors that pick up your brain scans. You will be able to rearrange the shape of objects. Sensors in your clothing, bathroom, and appliances will monitor your vitals, and nanobots will scan your DNA and cells for signs of danger, allowing life expectancy to increase dramatically. Radically new spaceships using laser propulsion may replace the expensive chemical rockets of today. You may be able to take an elevator hundreds of miles into space by simply pushing the up button. Like Physics of the Impossible and Visions before it, Physics of the Future is an exhilarating wondrous ride through the next one hundred years of breathtaking scientific revolution. Internationally acclaimed physicist Dr. Michio Kaku holds the Henry Semat Chair in Theoretical Physics at the City University of New York. He is also an international bestselling author; his books include Hyperspace and Parallel Worlds, and a distinguished writer having featured in Time, the Wall Street Journal, the Sunday Times, and the New Scientist, to name but a few. Dr. Kaku also hosts his own radio show, Science Fantastic, and recently presented the BBC's popular series Time.

Physics of the Future Michio Kaku, 2012 A whirlwind tour of technological possibility. New Scientist Welcome to the future where you'll be able to take an elevator hundreds of miles into space, the internet will be in your contact lens, nanobots will scan your DNA for signs of disease, and you'll be able to control computers with your brain and even rearrange the physical world itself. It may sound like science fiction, but as physics guru Michio Kaku shows, this is the shape of things to come. Based on interviews with over three hundred of the world's top scientists who are already inventing this future in their labs, Physics of the Future is a time travelling tour through the revolutionary advances in medicine, computers, quantum physics, and space travel that will forever change our way of life and alter the course of civilization itself.
