Johnson,Brian L. Beard,Francis Albarède,2018-12-17 The goal for Volume 55 of *Reviews in Mineralogy and Geochemistry* was to bring together a summary of the isotope geochemistry of non traditional stable isotope systems as is known through 2003 for those elements that have been studied in some detail and which have a variety of geochemical properties In addition recognizing that many of these elements are of interest to workers who are outside the traditional stable isotope fields we felt it was important to include discussions on the broad isotopic variations that occur in the solar system theoretical approaches to calculating isotopic fractionations and the variety of analytical methods that are in use We hope therefore that this volume proves to be useful to not only the isotope specialist but to others who are interested in the contributions that these non traditional stable isotopes may make toward understanding geochemical and biological cycles The review chapters in this volume were the basis for a two day short course on nontraditional stable isotopes held prior May 15 16 2004 to the spring AGU CGU Meeting in Montreal Canada *Conference Proceeding. An Economic Sociology of Law Reimagined Clare Williams, 2022-12-14 This book critically examines the concept of embeddedness the core concept of an economic sociology of law ESL It suggests that our ways of doing talking and thinking about law economy and society reproduce and re entrench mainstream approaches shaping our thoughts and actions such that we perform according to the model Taking a deep dive into one example the concept of embeddedness this book combines insights from law sociology economics and psychology to show that while we use metaphor to talk about law and economy our metaphors in turn use us moulding us into their fictionalized caricatures of homo juridicus and homo economicus The result is a groundbreaking study into the prioritization throughout society of interests and voices that align with doctrinal understandings of law and neoclassical understandings of economics approaches that led us into the dilemmas currently facing society Zooming out from a detailed exploration of embeddedness in economic sociology and ESL literature the book unpacks the fashionable post 2008 claim that the economy should be re embedded in society and proposes two conceptual shifts in response The book draws on personas and vignettes throughout both to imagine and to realize shifting an ESL beyond embeddedness This timely engagement with the emerging field of economic sociology of law will appeal to socio legal scholars and others with interests in the intersection of law economics and sociology The Open Access versions of Chapter 1 and Chapter 6 available at www.taylorfrancis.com have been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Science News-letter, 1962 **Ordered and Turbulent Patterns in Taylor-Couette Flow** C. David Andereck, F. Hayot, 2012-12-06 Seldom does a physical system particularly one as apparently simple as the flow of a Newtonian fluid between concentric rotating cylinders retain the interest of scientists applied mathematicians and engineers for very long Yet as this volume goes to press it has been nearly 70 years since G I Taylor s outstanding experimental and theoretical study of the linear stability of this flow was published and a century since the first experiments were performed

on rotating cylinder viscometers Since then the study of this system has progressed enormously but new features of the flow patterns are still being uncovered Interesting variations on the basic system abound Connections with open flows are being made More complex fluids are used in some experiments The vigor of the research going on in this particular example of nonequilibrium systems was very apparent at the NATO Advanced Research Workshop on Ordered and Turbulent Patterns in Taylor Couette Flow held in Columbus Ohio USA May 22 24 1991 A primary goal of this ARW was to bring together those interested in pattern formation in the classic Taylor Couette problem with those looking at variations on the basic system and with those interested in related systems in order to better define the interesting areas for the future the open questions and the features common and not common to closed and open systems This volume contains many of the contributions presented during the workshop
