Boyle,1985 **Maximum Principles and Sharp Constants for Solutions of Elliptic and Parabolic Systems** Gershon Kresin,V. G. Maz_i_a_,2012-08-15 The main goal of this book is to present results pertaining to various versions of the maximum principle for elliptic and parabolic systems of arbitrary order In particular the authors present necessary and sufficient conditions for validity of the classical maximum modulus principles for systems of second order and obtain sharp constants in inequalities of Miranda Agmon type and in many other inequalities of a similar nature Somewhat related to this topic are explicit formulas for the norms and the essential norms of boundary integral operators The proofs are based on a unified approach using on one hand representations of the norms of matrix valued integral operators whose target spaces are linear and finite dimensional and on the other hand on solving certain finite dimensional optimization problems This book reflects results obtained by the authors and can be useful to research mathematicians and graduate students interested in partial differential equations **Teaching and Learning in the Science Laboratory** Dimitris Psillos,H. Niedderer,2006-05-05 Scope of the book There is an on going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers researchers and policy makers world wide in the value of laboratory work for understanding science This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education Woolnough Alsop 1985 Hodson 1993 Hegarthy Hazel 1990 Wellington 2000 Yet in discussing research studies on labwork several authors express their concern about its effectiveness in facilitating students understanding of various aspects of scientific inquiry They point out a comprehensive re conceptualisation of the aims of labwork and as a consequence of investigating what the students actually learn in different contexts Lazarowitz Tamir 1994 Tobin Tippins 1993 Lunetta 1998 It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research Leach Paulsen 1999 It appears that the case for research based labwork emerges in several quarters in science education particularly among researchers This book presents and discusses a variety of laboratory practices and their effectiveness The studies take into account recent theoretical developments and empirical results concerning students understanding of scientific inquiry A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher *The Educational Times, and Journal of the College of Preceptors* ,1892
