of time during which geometry has been taught in American schools Notable events include important reports or commissions influential texts new schools of thought and developments in learning technologies These events affected among other things content and aims of the geometry curriculum the nature of mathematical activity as construed by both mathematicians and mathematics educators and the resources students are given for engaging in mathematical activity Before embarking through the notable events it is necessary to consider the big bang of geometry namely the moment in time that shaped the future life of the geometry curriculum This corresponds to the emergence of Euclidean geometry Given its influence on the shape of the geometry curriculum familiarity with the nature of the geometry articulated in Euclid's *Elements* is essential to understanding the many tensions that surround the school geometry curriculum Several themes emerge over the course of the monograph and include the aims and means of the geometry curriculum the importance of proof in geometry the role of visualization and tactile experiences the fusion between solid and plane geometry the curricular connections between geometry and algebra and the use of motion and continuity The intended audience would include curriculum developers researchers teachers and curriculum supervisors
