Theorem Proving in Higher Order Logics Stefan Berghofer, Tobias Nipkow, Christian Urban, Makarius Wenzel, 2009-08-04

This volume constitutes the proceedings of the 22nd International Conference on Theorem Proving in Higher Order Logics TPHOLs 2009 which was held during August 17-20, 2009 in Munich, Germany. TPHOLs covers all aspects of theorem proving in higher order logics as well as related topics in theorem proving and verification. There were 55 papers submitted to TPHOLs 2009 in the full research category each of which was refereed by at least three reviewers selected by the Program Committee. Of these submissions, 26 research papers and 1 proof pearl were accepted for presentation at the conference and publication in this volume. In keeping with longstanding tradition, TPHOLs 2009 also offered a venue for the presentation of emerging trends where researchers invited discussion by means of a brief introductory talk and then discussed their work at a poster session. A supplementary proceedings volume was published as a 2009 technical report of the Technische Universität München. The organizers are grateful to David Basin, John Harrison, and Wolfram Schulte for agreeing to give invited talks. We also invited four tool developers to give tutorials about their systems. The following speakers kindly accepted our invitation and we are grateful to them: John Harrison, HOL Light, Adam Naumowicz, Mizar, Ulf Norell, Agda, and Carsten Schürmann, Twelf.

Integrated Photonics Clifford Pollock, Michal Lipson, 2013-06-29 From the beginning Integrated Photonics introduces numerical techniques for studying non-analytic structures. Most chapters have numerical problems designed for solution using a computational program such as Matlab or Mathematica. An entire chapter is devoted to one of the numeric simulation techniques being used in optoelectronic design, the Beam Propagation Method, and provides opportunity for students to explore some novel optical structures without too much effort. Small pieces of code are supplied where appropriate to get the reader started on the numeric work. Integrated Photonics is designed for the senior first-year graduate student and requires a basic familiarity with electromagnetic waves and the ability to solve differential equations with boundary conditions.

Computational Liquid Crystal Photonics Salah Obayya, Mohamed Farhat O. Hameed, Nihal F. F. Areed, 2016-05-31 Optical computers and photonic integrated circuits in high-capacity optical networks are hot topics attracting the attention of expert researchers and commercial technology companies. Optical packet switching and routing technologies promise to provide a more efficient source of power and footprint scaling with increased router capacity, integrating more optical processing elements into the same chip to increase on-chip processing capability, and system intelligence has become a priority. This book is an in-depth look at modelling techniques and the simulation of a wide range of liquid crystal-based modern photonic devices with enhanced high levels of flexible integration and enhanced power processing. It covers the physics of liquid crystal materials, techniques required for modelling liquid crystal-based devices, the state-of-the-art liquid crystal photonic-based applications for telecommunications such as couplers, polarization rotators, polarization splitters, and multiplexer/demultiplexers, liquid-core photonic crystal fiber (LC-PCF) sensors including biomedical

and temperature sensors and liquid crystal photonic crystal based encryption systems for security applications Key features Offers a unique source of in depth learning on the fundamental principles of computational liquid crystal photonics Explains complex concepts such as photonic crystals liquid crystals waveguides and modes and frequency and time domain techniques used in the design of liquid crystal photonic crystal photonic devices in terms that are easy to understand Demonstrates the useful properties of liquid crystals in a diverse and ever growing list of technological applications Requires only a foundational knowledge of mathematics and physics
