Power Supplies Of Magnetrons: Modeling, Simulation And Optimization El Ghazal Naama, Chraygane Mohammed, Belhaiba Abderrahim, 2013 The aim of this book is to provide the needed basic knowledge to use the Matlab Simulink software on a computer to simulate the modeling and optimization of a single phase high voltage power supply for industrial microwave generators with N magnetrons 800 Watts 2450 MHz treated cases N 1 and N 2 This original work will contribute to develop of research in the field of manufacturing technology of current single phase power supplies three phase and future hexa phase with the aim to keep the operating performance of these systems and obtain the following benefits Reduction in the cost of producing the installation of the HV power supplies for magnetrons Decrease the congestion volume and cost of maintenance of these installations *Modeling and Optimization of High Voltage Power Supply for Magnetron* Abderrahim Belhaiba, Mohammed Chraygane, Naama Elghazal, 2013 The high voltage power supply for magnetron used for the modular microwave generators in industrial applications is a classical design This system is composed of a single phase high voltage transformer with shunts supplying a cell composed of a capacitor and a diode which doubles the voltage and stabilizes the current In this case the leakage fluxes in the magnetic shunts are of the same order in the primary and the secondary fluxes In this work a quadruple model of this leakage transformer is developed taking account the saturation phenomena and the stabilization of the magnetron current From the model of the transformer we will define a strategy of optimization aims at restricting the study of the effect of simultaneous variation of pertinent parameters on the magnetron current This will lead to find an optimized solution of the transformer The later with reduced volume weight and therefore cost will make the power supply more economical *Power System Blockset*, 2000
