DNA Nanoscience Kenneth Douglas, 2016-10-14 DNA Nanoscience From Prebiotic Origins to Emerging Nanotechnology melds two tales of DNA One is a look at the first 35 years of DNA nanotechnology to better appreciate what lies ahead in this emerging field The other story looks back 4 billion years to the possible origins of DNA which are shrouded in mystery The book is divided into three parts comprised of 15 chapters and two Brief Interludes Part I includes subjects underpinning the book such as a primer on DNA the broader discipline of nanoscience and experimental tools used by the principals in the narrative Part II examines the field of structural DNA nanotechnology founded by biochemist crystallographer Nadrian Seeman that uses DNA as a construction material for nanoscale structures and devices rather than as a genetic material Part III looks at the work of physicists Noel Clark and Tommaso Bellini who found that short DNA nanoDNA forms liquid crystals that act as a structural gatekeeper orchestrating a series of self assembly processes using nanoDNA This led to an explanation of the polymeric structure of DNA and of how life may have emerged from the prebiotic clutter *Molecular Biology* Mr. Rohit Manglik, 2024-01-14 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels *Stepping Stones to Synthetic Biology* Sergio Carrà, 2018-10-10 This book explores fascinating topics at the edge of life guiding the reader all the way from the relation of life processes to the second law of thermodynamics and the abundance of complex organic compounds in the universe through to the latest advances in synthetic biology and metabolic engineering The background to the book is the extraordinary scientific adventures that are being undertaken as progress is made toward the creation of an artificial cell and the control of life processes This journey involves input from research areas as diverse as genetic engineering physical chemistry and information theory Life is to be thought of not only as a chemical event but also as an information process with the genome a repository of information gathered over time through evolution Knowledge of the mechanisms affecting the increase in complexity associated with evolutionary paths is improving and there appear to be analogies with the evolution of the technologies promoting the development of our society The book will be of wide interest to students at all levels and to others with an interest in the subject **A History of Muslims, Christians, and Jews in the Middle East** Heather J.
