WHAT IS TECHNOLOGY?

An example of defining technology in a too narrow manner is the common contemporary tendency to mean by "technology" solely computers and cell phones, leaving out all of machine technology, let alone other technology. A case of defining technology in a manner that may be too broad is B. F. Skinner's inclusion of all human activity in technology. Skinner understands human activity as being conditioned and self-conditioning. For Skinner conditioning is considered to be behavioral technology. A related move is the general inclusion of "psychological technology" as part of the motivational apparatus of technological activities, such as chanting in hunter-gatherer societies, or various political beliefs in industrial societies (propagated by propaganda, understood as a kind of technology by Ellul), thereby erasing the distinction between technology and culture by including *all* of culture within technology (see below on Jarvie).

Definitions of Technology

Three definitions or characterizations of technology are: (a) technology as hardware; (b) technology as rules; and (c) technology as system.

Technology as hardware

Probably the most obvious definition of technology is as tools and machines. Generally the imagery used to illustrate a brochure or flier on technology is that of things such as rockets, power plants, computers, and factories. The understanding of technology as tools or machines is concrete and easily graspable. It lies behind much discussion of technology even when not made explicit. (Lewis Mumford (1895–1990) made a distinction between tools and machines in which the user directly manipulates tools, while machines are more independent of the skill of the user.)

One problem for the definition of technology as tools or machines is cases where technology is claimed not to use either tools or machines. One such non-hardware technology is the behavioral technology of the psychologist B. F. Skinner (1904–90). If one considers verbal or interpersonal manipulation or direction of the behavior of another as technology then it appears we have technology without tools. Mumford claims that the earliest "machine" in human history was the organization of large numbers of people for manual labor in moving earth for dams or irrigation projects in the earliest civilizations, such as Egypt, ancient Sumer in Iraq, or ancient China. Mumford calls

Philosophy of Technology The TechnologicalCondition An Anthology edited by Robert C Scharff and ValDusek Blackwell 2003
    Introduction to Philosophy of Technology Mark Coeckelbergh,2020 Addressing the technological opportunities and challenges of the 21st century Introduction to Philosophy of Technology offers the most up to date and comprehensive overview of philosophy of technology available It covers several of the classic theories and approaches but also moves beyond them to explore a broader range of theories and a number of new dynamics in the field including responding to new technological developments Esteemed scholar Mark Coeckelbergh emphasizes how new technological developments stimulate philosophical thinking and rethinking and how philosophers of technology could do more to interact with other subdisciplines in philosophy and fields beyond academia such as art and policy   *Philosophy of Technology* Robert C. Scharff,Val Dusek,2013-12-02 The new edition of this authoritative introduction to the philosophy of technology includes recent developments in the subject while retaining the range and depth of its selection of seminal contributions and its much admired editorial commentary Remains the most comprehensive anthology on the philosophy of technology available Includes editors insightful section introductions and critical summaries for each selection Revised and updated to reflect the latest developments in the field Combines difficult to find seminal essays with a judicious selection of contemporary material Examines the relationship between technology and the understanding of the nature of science that underlies technology studies   American Philosophy of Technology Hans Achterhuis,2001 Introduces contemporary American philosophy of technology through six of its leading figures The six American philosophers of technology whose work is profiled in this clear and concise introduction to the field Albert Borgmann Hubert Dreyfus Andrew Feenberg Donna Haraway Don Ihde and Langdon Winner represent a new empirical direction in the philosophical study of technology that has developed mainly in North America In place of the grand philosophical schemes of the classical generation of European philosophers of technology including Martin Heidgger Jacques Ellul and Hans Jonas the contemporary American generation addresses concrete technological practices and the co evolution of technology and society in modern culture Six Dutch philosophers associated with Twente University survey and critique the full scope and development of their American colleagues work often illustrating shifts from earlier to more recent interests Individual chapters focus on Borgmann s engagement with technology and everyday life Dreyfus s work on the limits of artificial intelligence Feenberg s perspectives on the cultural and social possibilities opened by technologies Haraway s conception of the cyborg and its attendant blurring of boundaries Ihde s explorations of the place of technology in the lifeworld and Winner s fascination with the moral and political implications of modern technologies American Philosophy of Technology offers an insightful and readable introduction to this new and distinctly American philosophical turn Contributors are Hans Achterhuis Philip Brey Ren Munnik Martijntje Smits Pieter Tijmes and Peter Paul Verbeek   *Philosophy of Technology* Don Ihde,1998-04-13 Technology s impact on and implications for the social ethical political and cultural dimensions of our world must be seriously considered and addressed Philosophy of

Technology is a clear introduction to one of philosophy s newest issues Don Ihde critically examines the impact of technological developments on various cultures throughout history from the earliest feats of engineering and architecture to the cutting edge developments in artificial intelligence with an aim to understanding the human implications within a world technological culture Using a wide variety of concrete examples and illustrations including artificial intelligence robotics and nuclear energy the author looks at both the current situation and future directions In a final chapter he takes the position that the foundational concern for the twenty first century is the global environment followed closely by multiculturality and its effect on technoculture the future of warfare and the distribution of wealth in a world economy Special Features Provides an introduction to the best and most recent literature on the subject Places the philosophy of technology within the overall project of philosophy Provides a clear and comprehensive overview of the main issue in the field Promotes understanding of the special role of philosophical criticism Contains a wealth of often humorous and highly imaginative examples that have become the hallmark of this author **Philosophy of Technology** Mr. Rohit Manglik,2023-08-23 In this book we will study about the ethical and existential implications of technology on society and human life *Philosophy and Technology* P.T. Durbin,F. Rapp,2012-12-06 Only recently has the phenomenon of technology become an object of in terest for philosophers The first attempts at a philosophy of technology date back scarcely a hundred years a span of time extremely short when com pared with the antiquity of philosophical reflections on nature science and society Over that hundred year span speculative critical and empiricist approaches of various sorts have been put forward Nevertheless even now there remains a broad gap between the importance of technology in the real world and the sparse number of philosophical works dedicated to the under standing of modern technology As a result of the complex structure of modern technology it can be dealt with in very different ways These range from metaphysical exposition to efforts aimed at political consensus Quite naturally within such a broad range certain national accents can be discovered they are shaped by a com mon language accepted philosophical traditions and concrete problems requiring consideration Even so the worldwide impact of technology its penetration into all spheres of individual social and cultural life together with the urgency of the problems raised in this context all these demand a joint philosophical discussion that transcends the barriers of language and cultural differences The papers printed here are intended to exemplify such an effort at culture transcending philosophical discussion **A Companion to the Philosophy of Technology** Jan Kyrre Berg Olsen,Stig Andur Pedersen,Vincent F. Hendricks,2012-10-01 Drawing on essays from leading international and multi disciplinary scholars A Companion to the Philosophy of Technology is the first comprehensive and authoritative reference source to cover the key issues of technology s impact on society and our lives Presents the first complete authoritative reference work in the field Organized thematically for use both as a full introduction to the field or an encyclopedic reference Draws on original essays from leading interdisciplinary scholars Features the most up to date and cutting edge research in the interdisciplinary fields of philosophy technology and their broader intellectual environments

Philosophy and Technology Carl Mitcham,Robert Mackey,1983 From editors Carl Mitcham and Robert Mackey comes an unusually reflective and wide ranging colloquium on technology as a philosophical problem Organized into sections on conceptual issues ethical and political critiques religious critiques existentialist critiques and metaphysical studies Philosophy and Technology features an introductory overview that suggests the aims of truly comprehensive philosophy of technology Philosophy and Technology features essays by Jacques Ellul Lewis Mumford Ortega y Gasset and C S Lewis This revised and fully updated edition features a comprehensive bibliography   **Portuguese Philosophy of Technology** Helena Mateus Jerónimo,2022-11-23 This volume is a collection of essays of a philosophical nature on the subject of technology introducing authors from the Portuguese speaking community namely from Portugal itself Africa and Brazil Their contributions detail a unique perspective on technology placing this important topic within the historical ideological and social contexts of their countries all of which share a common language The shared history of these countries and the cultural and economic specificities of each one have stimulated singular insights into these thinkers reflections The essays are thematically diverse Among the topics covered are technogenic knowledge visions of technology risks and uncertainties mediatization digitalization and datafication engineering practice and ethics alternative technoscientific strategies ontotechnologies of the body virtual and archive The contributions also explore other themes that are more closely related to the semi peripheral world such as technological dependence and the incorporation of Western technology into the social structure of ancestral communities This book appeals to students and researchers and provides a voice to authors whose work are not usually available in English language publications It serves as an ideal guide for all those who seek rigorous and geographically widespread knowledge regarding thinking on technology in several Portuguese speaking countries

Philosophies of Technologies Valerie Charolles,Elise Lamy-Rested,2024-05-29 In the space of a century technologies have acquired unprecedented power The result of these developments is a new form of the world These transformations test our capacities and generate new crises with multiple issues at stake Drawing on the lessons of a long history Philosophies of Technologies examines the continuities and disruptions brought about by the power of contemporary technical systems without reducing them to the digital age It draws together 13 authors from different schools of thought and proposes tools that combine productive technology with sustainability innovation and responsibility This book wagers that in the face of the sprawling and ever changing deployment of technologies philosophy is able to respond to the changes that offer so many opportunities to shape our future Today technologies need a philosophical moment   **Phenomenology and the Philosophy of Technology** Bas de Boer,Jochem Zwier,2024-10-16 Our contemporary world is undeniably intertwined with technology influencing every aspect of human life This edited volume delves into why modern philosophical approaches to technology closely align with phenomenology and explores the implications of this relationship Over the past two decades scholars have emphasized users lived experiences and their interactions with technological practices arguing that

technologies gain meaning and shape within specific contexts actively shaping those contexts in return This book investigates the phenomenological roots of contemporary philosophy of technology examining how phenomenology informs analyses of temporality use cognition embodiment and environmentality Divided into three sections the volume begins by exploring the role of phenomenological methods in the philosophy of technology and further investigates the methodological implications of combining phenomenology with other philosophical schools The second section examines technology as a phenomenon debating whether it should be analysed as a whole or through individual artifacts The final section addresses the practical applications of phenomenological insights in design practices and democratic engagement By offering a systematic exploration of the connection between phenomenology and technology this volume provides valuable insights for scholars students and researchers in related fields highlighting the continued relevance of phenomenological perspectives in understanding our technologically mediated world **Technology Education for Teachers** P. John Williams,2013-02-11 This is a textbook for use in technology teacher training and also a reference book for technology teachers It will provide a foundation for new teachers entering the area of technology and also the opportunity for practicing teachers to keep up to date with research informed ideas about teaching technology Technology in the curriculum has continually faced a range of challenges throughout its history in many counties Often the basis of the challenges is the result of a lack of understanding about good technology practice It is hoped that this book can encourage excellent practice in technology teaching and so increase the number of schools positively engaged with technology The chapter authors are internationally respected and experienced educators who have been able to draw on both their teaching experience and their research in order to discuss a range of aspects of teaching technology The book has been developed with an international audience in mind While authors are naturally most familiar with their own country efforts have been made to generalize from the principles of sound theory and research based practice to maximize applicability to local contexts John Williams is the Director of the Technology Environmental Mathematics and Science Education Research Centre at the University of Waikato in New Zealand He has worked as a designer and builder and began his career as a secondary school Manual Arts teacher He has taught and studied in Australia and the USA and in a number of African and Indian Ocean countries He has published and presented widely and enjoys fishing *The Routledge Handbook of Education Technology* Santoshi Halder,Sanju Saha,2023-03-10 This handbook offers a comprehensive understanding of the use of technology in education With a focus on the development of Education Technology in India it explores innovative strategies as well as challenges in incorporating technology to support learning The volume examines diverse learning approaches such as assistive technology and augmentative and alternative communication for learners with disabilities and creating more social and accessible environments for learning through Collaborative Learning Techniques CoLTS massive open online courses MOOCs and the use of AI Artificial Intelligence in modern classrooms Enriched with discussions on recent trends in ET Education Technology university curriculum and syllabi

Philosophy, Technology, and the Environment David M. Kaplan,2017-03-03 Contributions by prominent scholars examining the intersections of environmental philosophy and philosophy of technology Environmental philosophy and philosophy of technology have taken divergent paths despite their common interest in examining human modification of the natural world Yet philosophers from each field have a lot to contribute to the other Environmental issues inevitably involve technologies and technologies inevitably have environmental impacts In this book prominent scholars from both fields illuminate the intersections of environmental philosophy and philosophy of technology offering the beginnings of a rich new hybrid discourse All the contributors share the intuition that technology and the environment overlap in ways that are relevant in both philosophical and practical terms They consider such issues as the limits of technological interventions in the natural world whether a concern for the environment can be designed into things how consumerism relates us to artifacts and environments and how food and animal agriculture raise questions about both culture and nature They discuss among other topics the pessimism and dystopianism shared by environmentalists environmental philosophers and philosophers of technology the ethics of geoengineering and climate change the biological analogy at the heart of industrial ecology green products and sustainable design and agriculture as a bridge between technology and the environment Contributors Braden Allenby Raymond Anthony Philip Brey J Baird Callicott Brett Clark Wyatt Galusky Ryan Gunderson Benjamin Hale Clare Heyward Don Idhe Mark Sagoff Julian Savulescu Paul B Thompson Ibo van de Poel Zhang Wei Kyle Powys Whyte   The Ethics of Today's Science and Technology Wenchao Li,Hans Poser,2008 Beneath the discussion and clarification of problems of which both sides agreed to have them in common and which are documented in this volume one of the important insights on both sides had been disagreements depending on a different way in seeing articulating and reflecting on these problems So the English term science in differing from the German Wissenschaft which includes not only sciences of nature but also humanities is meant in the Western tradition as the uninterested research for truth especially for most general laws but the Chinese understanding seems to be characterized by an immediate connection of science and its practical use
