Instructional Development in Higher Education Cees Terlouw, 1993 There is a growing need in Higher Education to re develop components in the curriculum in accordance with new views on the instructional tasks goals and methods These views concern the stress on problem solving the interest in students learning processes and the use of computer assisted instruction Instructional Development is viewed as the understanding improving and applying of methods for instructional problem analysis design construction implementation formative evaluation and summative evaluation Two positions can be taken the theoretical position which is concerned with producing theoretically sound and empirically valid prescriptions about procedures for instructional development and the practical position in which instructional development is actually applied in some situations resulting in an optimal working artifact This book advocates an integrative approach to instructional development in which on the one hand theory and practice are connected producing valid knowledge about procedures of instructional development and on the other hand activities in theory or practice result in products which have an independent value within the position chosen Theory and practice of instructional development are goals within a continuum on which different positions are possible The book discusses examples of some of these positions in the area of higher education Inquiry and Problem Solving ,1999 **Active Learning: Theoretical Perspectives, Empirical** Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e

extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in betweens straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
