A Textbook of Matrices Hari Kishan, 2008-11 Iit Objective Chemistry Arun Syamal, 2008-08 Role Of Symmetry, Groups And Matrices In Chemistry R.S. Thakur, 2007 A new area is emerging in chemistry for debate and discussion on molecular structure and bonding of molecules of different types in which the role of symmetry is most vital. The two elegant parts of mathematics, group and matrix, have drawn special attention on the key subject of symmetry. Three mathematical branches, symmetry, groups, and matrices, have been selected to develop a new text on chemistry that has witnessed growth up to Buckminsterfullerenes, carbon 60, with I_h point group. The first part of the series on chemical mathematics is based on the model proposed by Prof. H. M. Chawla, an IITian from Delhi. It is a well-distinguished approach to an important ingredient of physical science. Apart from physics efforts, there have been attempts to formulate a complete course structure on group theory and chemistry. The second part of the series on chemical mathematics has laid the foundation of quantum chemistry, quantum mechanics in the domain of molecular world. This series exhibits a continuum on bringing the relevant books for honours and postgraduate level in the universities of the Indian subcontinent as well as some other countries. A fundamental approach supplying a good deal of vocabulary prepared by the Mathematical Foundation has been provided for the benefit of students of molecular chemistry.
