

Hotel Reservation System

Objective:

- **The Hotel Reservation system** will provide service to on-line customers, employee, and an administrator. Online customers can make searches, reservations and cancel an existing reservation on the hotel reservation's web site. Administrator can add/update the hotel and the room information approve/disapprove a new employee account application and generate a monthly occupancy rate report for each hotel.

Existing System:

- This existing system is not providing secure registration and profile management of all the users properly.
- This manual system gives us very less security for saving data and some data may be lost due to mismanagement.
- The system is giving only less memory usage for the users.

Proposed System:

The development of this new system contains the following activities, which try to automate the entire process keeping in the view of database integration approach.

- This system maintains user's personal info, address, and contact details.
- User friendliness is provided in the application with various controls provided by system rich user interface.
- This system makes the overall project management much easier and flexible.
- Various classes have been used for maintaining the details of all the users and catalog.
- Authentication is provided for this application. Only registered users can access.
- Report generation feature is provided used to generate different kind of reports.
- This system is providing more memory for the users to maintain data.
- This system is providing accessibility control to data with respect to users.

Number of Modules:

The system after careful analysis has been identified to be presented with the following modules:

1. Authentication and Security Module
2. Admin Module
3. Employee Module.
4. Hotel Rooms Management Module.
5. Service Management Module.
6. Reports Module.

1. Authentication and Security Module

Formal Engineering for Industrial Software Development Shaoying Liu, 2013-03-09 In any serious engineering discipline it would be unthinkable to construct a large system without having a precise notion of what is to be built and without verifying how the system is expected to function Software engineering is no different in this respect Formal methods involve the use of mathematical notation and calculus in software development such methods are difficult to apply to large scale systems with practical constraints e.g limited developer skills time and budget restrictions changing requirements Here Liu claims that formal engineering methods may bridge this gap He advocates the incorporation of mathematical notation into the software engineering process thus substantially improving the rigor comprehensibility and effectiveness of the methods commonly used in industry This book provides an introduction to the SOFL Structured Object Oriented Formal Language method that was designed and industry tested by the author Written in a style suitable for lecture courses or for use by professionals there are numerous exercises and a significant real world case study so the readers are provided with all the knowledge and examples needed to successfully apply the method in their own projects
