Kindermann, Jaan

Valsiner, 2013-06-17 Traditionally developmental psychology has its focus on individuals Developmentalists aim to describe regularities in individuals change and development across time to explain the processes and mechanisms that are involved in

producing change and regularity and eventually to design strategies for optimization and modification of developmental pathways. Although the role of contexts has always been of central concern for these purposes it is nevertheless quite surprising to note that compared to the effort devoted to individuals relatively little attention has been paid to the study of the nature and organization of their contexts. This volume is an exploration of the idea that how we describe and explain human development will be closely tied to our understanding of what contexts are how individuals and contexts become influential for one another what contexts do to and with individuals and how contexts and their influences change themselves across time. A major theme is whether the traditional dichotomy between individuals and their contexts may be artificial perhaps culturally biased and after psychologists have adhered to it for about a century may have become an impediment to increasing our understanding of developmental processes. With this volume the editors contribute a serious consideration of development and systematic change to emerging models of person context relations and provide suggestions about how it may be possible to incorporate these notions in developmental research and theorizing.

The Handbook of Life-Span Development, Volume 2, 2010-08-09 In the past fifty years scholars of human development have been moving from studying change in humans within sharply defined periods to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes. The Handbook of Life Span Development Volume 2 Social and Emotional Development presents the study of human development conducted by the best scholars in the 21st century. Social workers counselors and public health workers will receive coverage of the social and emotional aspects of human change across the lifespan.

Handbook of Stressful Transitions Across the Lifespan Thomas W. Miller, 2009-11-28 This volume provides a unique and valuable contribution to our understanding of the impact of stressful life events and mass trauma on the person the culture and society in the course of the life span. It provides a comprehensive look at our psychological state of affairs at the beginning of the twenty first century. There are several volumes that address some or most of these areas individually but this volume is unique in that it has brought together theoreticians researchers and clinicians who address critical challenges in our lives. But we are now several months into the global financial crisis requiring a transition not only for the western world but for the third world. How on earth do families in trauma zones from Sri Lanka to Afghanistan New Orleans to Gaza cope with similar declining older relatives with added traumas and zero medical resources attempt to survive. In news reports politicians and financiers denying the inevitable and struggling for solutions that cannot be relevant to the new reality that they have yet to discover.
