Fundamentals and Applications of Anion Separations

Bruce A. Moyer, Raj P. Singh, 2011-06-27 This book documents the proceedings of the symposium Fundamentals and Applications of Anion Separations held during American Chemical Society National Meeting in Chicago Illinois August 25 30 2001 Nearly 40 papers devoted to discussions on anion separation related to fundamental research and applications were presented The symposium sponsored by Osram Sylvania BetzDearborn and the Separation Science Technology Subdivision of the Industrial Engineering Chemistry Division of the American Chemical Society was organized by Bruce A Moyer Chemical Sciences Division Oak Ridge National Laboratory P O Box 2008 Building 4500S Oak Ridge TN 37831 6119 and Raj P Singh Chemicals and Powders R D Osram Sylvania Chemical and Metallurgical Products Division Towanda PA 18848 It drew presenters from Australia the Czech Republic France Germany Japan South Africa Thailand the United Kingdom and the United States Separations constitute an integral part of chemical industry Chemical products typically originate in resources that must be concentrated and purified chemically transformed and subjected to final purification Effluent streams from the processes must be treated to recycle reusable components and to remove environmentally harmful species Some industrial processes are devoted to environmental cleanup after pollution has occurred In addition many analytical methods require a separation for preconcentration or a separation may be an inherent part of the analysis itself Micro separations occurring at

membranes or interfaces are also related phenomena employed for ion sensing Many species targeted for separation are naturally anionic Although the standard separations techniques of extraction ion exchange adsorption precipitation etc

Hydrometallurgical Process Fundamentals Renato G. Bautista, 2013-12-19 The mineral resources of the industrialized countries especially the member nations of the North Atlantic Treaty Organization are being depleted at such a rate that more and more of these countries are beginning to depend on ore imported from other countries To sustain the economic and strategic well being of these member countries it becomes imperative that a program of developing and exploiting other non conventional mineral resources and a conservation program where metal values from waste dumps and scrap metals and alloys are recycled must be initiated and implemented In order to meet this challenge new processes and technology must be available for consideration in the design and operation of the new plants One of the possible routes of extracting the metals from their ores especially for multimetal complex ores and very low grade ores is by hydrometallurgical processing The hydrometallurgical route of metal recovery where dissolution leaching separation and concentration ion exchange solvent extraction and membrane separation and reduction to metal cementation precipitation by gaseous reduction and electrolysis is carried out at near ambient temperature is becoming more competitive with the conventional high temperature processes used in the smelting of metals from high grade and beneficiated ores **Hydrometallurgy 2008**
