Fundamentals of Engineering Thermodynamics Michael J. Moran, Howard N. Shapiro, Daisie D. Boettner, Margaret B. Bailey, 2010-12-07 This leading text in the field maintains its engaging readable style while presenting a broader range of applications that motivate engineers to learn the core thermodynamics concepts Two new coauthors help update the material and integrate engaging new problems Throughout the chapters they focus on the relevance of thermodynamics to modern engineering problems Many relevant engineering based situations are also presented to help engineers model and solve these problems

Hydrosystems Engineering and Management Larry W. Mays, Yeou-Koung Tung, 2002 This book is intended to be a textbook for students of water resources engineering and management It is an introduction to methods used in hydrosystems for upper level undergraduate and graduate students The material can be presented to students with no background in operations research and with only an undergraduate background in hydrology and hydraulics A major focus is to bring together the use of economics operations research probability and statistics with the use of hydrology hydraulics and water resources for the analysis design operation and management of various types of water projects This book is an excellent reference for engineers water resource planners water resource systems analysts and water managers This book is concerned with the mathematical modeling of problems in water project design analysis operation and management The quantitative methods include a the simulation of various hydrologic and hydraulic processes b the use of operations research probability and statistics and economics Rarely have these methods been integrated in a systematic framework in a single book like Hydrosystems Engineering and Management An extensive number of example problems are presented for ease in understanding the material In addition a large number of end of chapter problems are provided for use in homework assignments

Energy Resources and Systems Tushar K. Ghosh, Mark A. Prelas, 2011-06-27 This second volume of Energy Resources and Systems is focused on renewable energy resources Renewable energy mainly comes from wind solar hydropower geothermal ocean bioenergy ethanol and hydrogen Each of these energy resources is important and growing For example high head hydroelectric energy is a well established energy resource and already contributes about 20% of the world's electricity Some countries have significant high head resources and produce the bulk of their electrical power by this method However the bulk of the world's high head hydroelectric resources have not been exploited particularly by the underdeveloped countries Low head hydroelectric is unexploited and has the potential to be a growth area Wind energy is the fastest growing of the renewable energy resources for the electricity generation Solar energy is a popular renewable energy resource Geothermal energy is viable near volcanic areas Bioenergy and ethanol have grown in recent years primarily due to changes in public policy meant to encourage its usage Energy policies stimulated the growth of ethanol for example with the unintended side effect of rise in food prices Hydrogen has been pushed as a transportation fuel The authors want to provide a comprehensive series of texts on the interlinking of the nature of energy resources the systems that utilize them

the environmental effects the socioeconomic impact the political aspects and governing policies Volume 1 on Fundamentals and Non Renewable Resources was published in 2009 It blends fundamental concepts with an understanding of the non renewable resources that dominate today s society The authors are now working on Volume 3 on nuclear advanced energy resources and nuclear batteries consists of fusion space power systems nuclear energy conversion nuclear batteries and advanced power fuel cells and energy storage Volume 4 will cover environmental effects remediation and policy Solutions to providing long term stable and economical energy is a complex problem which links social economical technical and environmental issues It is the goal of the four volume Energy Resources and Systems series to tell the whole story and provide the background required by students of energy to understand the complex nature of the problem and the importance of linking social economical technical and environmental issues

Contested Waterscapes in the Mekong Region Francois Molle, Tira Foran, Mira Kakonen, 2012-05-04 The catchment area of the Mekong River and its tributaries extends from China through Burma Myanmar Thailand Laos Cambodia and to Vietnam The water resources of the Mekong region from the Irrawaddy and Nu Salween in the west across the Chao Phraya to the Lancang Mekong and Red River in the east are increasingly contested Governments companies and banks are driving new investments in roads dams diversions irrigation schemes navigation facilities power plants and other emblems of conventional development Their plans and interventions should provide some benefits but also pose multiple burdens and risks to millions of people dependent on wetlands floodplains and aquatic resources in particular the wild capture fisheries of rivers and lakes This book examines how large scale projects are being proposed justified and built How are such projects contested and how do specific governance regimes influence decision making The book also highlights the emergence of new actors rights and trade off debates and the social and environmental consequences of water resources development This book shows how diverse and often antagonistic ideologies and interests are contesting for legitimacy It argues that the distribution of decision making political and discursive power influences how the waterscapes of the region will ultimately look and how benefits costs and risks will be distributed These issues are crucial for the transformation of waterscapes and the prospects for democratizing water
