Lexicology D. A. Cruse, 2002 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation To attain these objectives the series will aim for a standard comparable to that of the leading handbooks in other disciplines and to this end will strive for comprehensiveness theoretical explicitness reliable documentation of data and findings and up to date methodology The editors both of the series and of the individual volumes and the individual contributors are committed to this aim The languages of publication are English German and French The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks however no inflexible pre set limits will be imposed on the scope of each volume The series is open ended and can thus take account of further developments in the field This conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time table for the publication of the whole series Each volume will be a self contained work complete in itself The order in which the handbooks are published does not imply any rank ordering but is determined by the way in which the series is organized the editor of the whole series enlist a competent editor for each individual volume Once the principal editor for a volume has been found he or she then has a completely free hand in the choice of co editors and contributors The editors plan each volume independently of the others being governed only by general formal principles The series editor only intervene where questions of delineation between individual volumes are concerned It is felt that this modus operandi is best suited to achieving the objectives of the series namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume *Idioms* Martin Everaert, Erik-Jan van der Linden, Andr, Schenk, Rob Schreuder, Robert Schreuder, 2014-04-04 Idioms have always aroused the curiosity of linguists and there is a long tradition in the study of idioms especially within the fields of lexicology and lexicography Without denying the importance of this tradition this volume presents an overview of recent idiom research outside the immediate domain of lexicology lexicography The chapters address the status of idioms in recent formal and experimental linguistic theorizing Interdisciplinary in scope the contributions are written by psycholinguists and theoretical and computational linguists who take mutual advantage of progress in all disciplines Linguists supply the facts and analyses

psycholinguists base their models and experiments on psycholinguists in turn confront linguistic models with psycholinguistic findings Computational linguists build natural language processing systems on the basis of models and frameworks provided by theoretical linguists and sometimes psycholinguists and set up large corpora to test linguistic hypotheses Besides the fascination for idioms that make up such a large part of our knowledge of language interdisciplinarity is one of the attractions of investigations in idiomatic language and language processing
