## I J P The Book Of Surfaces:

Ijp George Liaropoulos-Legendre,2003 At a time when architectural discourse and practice are brimming with references to new geometries ijp turns its back on the habitual perception of the 3D surface as a photosensitive colourful and somewhat mystifying expanse Instead this experimental text approaches its subject through a joint meditation on abstraction figuration performance symbology and form elaborated in parallel venues including theoretical essays on the literal and metaphoric meaning of superficial statements of computer programming syntax recipes printouts of data streams indexical poetry mathematical asides and descriptions of numerically controlled fabrication processes all of which offer alternative descriptions of the very same thing the surface as object of knowledge A rigorous typographic treatment enhanced by custom programmed graphics stylizes the most technical side of these various threads and weaves them into a coherent narrative for nonspecialists

*Mathematics of Space* George Legendre,2011-08-29 A new title in the Architectural Design series that explores the potential of computational mathematics in cutting edge design Mathematics has always been a vital tool in the architect s trade but the last fifteen years have seen a sharp rise in the power of computers and has led to computational abilities far beyond anything previously available Modern design software and computing power have changed the traditional role of geometry in architecture and opened up new possibilities enabled by topology non Euclidean geometry and other areas of mathematics With insight from a top notch list of contributors including such notables as Philippe Morel and Fabien Scheurer Mathematics in Space discusses how the advent of computation and information technology has affected the work of contemporary architects This new title in the Architectural Design series updates architectural mathematics since the digital revolution With world class contributors this is an essential resource for anyone interested in the ways computation has transformed the discipline The book explores fascinating issues in modern design most importantly the impact of mathematics on contemporary design creativity For students and practitioners alike Mathematics in Space covers vital topics in a constantly changing discipline

**Surface** Giuliana Bruno,2014-06-09 What is the place of materiality the expression or condition of physical substance in our visual age of rapidly changing materials and media How is it fashioned in the arts or manifested in virtual forms In Surface cultural critic and theorist Giuliana Bruno deftly explores these questions seeking to understand materiality in the contemporary world Arguing that materiality is not a question of the materials themselves but rather the substance of material relations Bruno investigates the space of those relations examining how they appear on the surface of different media on film and video screens in gallery installations or on the skins of buildings and people The object of visual studies she contends goes well beyond the image and engages the surface as a place of contact between people and art objects As Bruno threads through these surface encounters she unveils the fabrics of the visual the textural qualities of works

of art whether manifested on canvas wall or screen Illuminating the modern surface condition she notes how fa ades are becoming virtual screens and the art of projection is reinvented on gallery walls She traverses the light spaces of artists Robert Irwin James Turrell Tacita Dean and Anthony McCall touches on the textured surfaces of Isaac Julien s and Wong Kar wai s filmic screens and travels across the surface materiality in the architectural practices of Diller Scofidio Renfro and Herzog de Meuron to the art of Doris Salcedo and Rachel Whiteread where the surface tension of media becomes concrete In performing these critical operations on the surface she articulates it as a site in which different forms of mediation memory and transformation can take place Surveying object relations across art architecture fashion design film and new media

Giovanni Corbellini, 2022-05-18 Architects write a lot especially now when conceptual aspects have become central in the advanced reflections and narrative forms increasingly intersect the quest of design practices far an ultimate legitimation In the growing mass of the publishing offer these keywords try to highlight recurrent issues tracking synthetic paths of orientation between different critical positions with particular attention to what happens in the neighbouring fields of the arts and sciences **The Return of Nature** Preston Cohen, Erika Naginski, 2014-07-09 The Return of Nature asks you to critique your conception of nature and your approach to architectural sustainability and green design What do the terms mean Are they de facto design requirements Or are they unintended design replacements The book is divided into five parts giving you multiple viewpoints on the role of the relations between architecture nature technology and culture A detailed

case study of a built project concludes each part to help you translate theory into practice This holistic approach will allow you to formulate your own theory and to adjust your practice based on your findings Will you provoke change design architecture that responds to change or both Coedited by an architect and a historian the book features new essays by Robert Levit Catherine Ingraham Sylvia Lavin Barry Bergdoll K Michael Hays Diane Lewis Andrew Payne Mark Jarzombek Jean Francois Chevrier Elizabeth Diller Antoine Picon and Jorge Silvetti Five case studies document the work of MOS Architects Michael Bell Architecture Steven Holl Architects George L Legendre and Preston Scott Cohen

**Interdisciplinary Design** Hanif Kara, Andreas Georgoulas, Jorge Silvetti, 2012 Architects and engineers both claim to be designers though how they define design and the approaches they use to realize it vary widely However their interaction has also created some of the world s most memorable enduring and impressive buildings The unprecedented impact of digital technologies illuminates the complexity and non linearity of the process that these designers go through while massively expanding both the ability to visualize and represent forms and to analyze their structural behavior It has obviously changed both architecture and engineering and so also the potential for interaction between them Interdisciplinary Design began as a course at Harvard GSD attended by graduate students in architecture and also by MIT graduate students in structural engineering and computation In this course students and instructors examined a series of built projects in order to develop new viewpoints and communication across disciplinary boundaries in teaching practice and construction *Digital Signifiers in an Architecture of Information* Pablo Lorenzo-Eiroa, 2023-05-31 This book proposes a new critical relationship between computation and architecture developing a history and theory of representation in architecture to understand and unleash potential means to open up creativity in the field Historically architecture has led to spatial representation Today computation has established new representational paradigms that can be compared to spatial representations such as the revolution of perspective in the Renaissance Architects now use software robotics and fabrication tools with very little understanding and participation in how these tools influence revolutionize and determine both architecture and its construction today Why does the discipline of architecture not have a higher degree of authorship in the conception and development of computational technologies that define spatial representation This book critically explores the relationship between history theory and cultural criticism Lorenzo Eiroa positions new understandings through parallel historical sections and theories of many revolutionary representational architecture canons displaced by conventional spatial projection He identifies the architects artists mathematicians and philosophers that were able to revolutionize their disciplines through the development of new technologies new systems of representation and new lenses to understand reality This book frames the discussion by addressing new means to understand and expand architecture authorship in relation to the survey information representation higher dimensional space Big Data and Artificial Intelligence in the pursuit of activating an architecture of information This will be important reading for upper level students and researchers of architecture and architectural theory

especially those with a keen interest in computational design and robotic fabrication      Design Computing and Cognition '10  
 John S. Gero, 2011-02-22 This volume contains the refereed and revised papers of the Fourth International Conference on Design Computing and Cognition DCC 10 held in Stuttgart Germany The material in this book represents the state of the art research and developments in design computing and design cognition The papers are grouped under the following nine headings describing both advances in theory and application and demonstrating the depth and breadth of design computing and design cognition Design Cognition Framework Models in Design Design Creativity Lines Planes Shape and Space in Design Decision Making Processes in Design Knowledge and Learning in Design Using Design Cognition Collaborative Collective Design and Design Generation This book is of particular interest to researchers developers and users of advanced computation in design across all disciplines and to those who need to gain better understanding of designing      **Echos** Mara Marcu, Edward Mitchell, 2021-07-21 The publication captures the work done at the University of Cincinnati School of Architecture and Interior Design while showcasing student work faculty research co op stories study abroad programs and snapshots from the many events happening at our school ECHOS is a platform for simultaneous conversations with shared ethos at UC SAID Various constellations begin to surface and map our diverse milieu of academic and social interactions that revolve around the following five main themes anxiety praxis trope chreod and utopia Introduced by a series of analytical diagrams which are paired up with essays by lead figures in the discipline the themes expand on the issues of theoretical anxiety architectural discourse practice typology self made analogies ad hoc morphologies inherent to research flux and reflux that return each disruption to a steady trajectory similar to the natural cycle of compression and release generated by our co op program and the fictitious the ideal Anxiety collects and synthesizes among multiple contradicting theories entertaining with equanimity various solutions to design problems Praxis looks at outcomes may those be physical prototypical digital or analog multi dimensional and multi media spoken written or unwritten as well as working methodologies that shape design thinking Trope begins to map out trends emergent ideologies and previously non denominational design expressions Chreod documents and interprets field conditions rule based processes issues of transgressions non smooth and nomadic entities which cut across arbolic like divisions Utopia while suspending various otherwise necessary constraints allows for a euphoric and optimistic view of the world with the goal of envisioning daring possibilities otherwise unimaginable Utopia therefore foreshadows all other themes      *Ornament* Antoine Picon, 2014-05-29 Once condemned by Modernism and compared to a crime by Adolf Loos ornament has made a spectacular return in contemporary architecture This is typified by the works of well known architects such as Herzog de Meuron Sauerbruch Hutton Farshid Moussavi Architecture and OMA There is no doubt that these new ornamental tendencies are inseparable from innovations in computer technology The proliferation of developments in design software has enabled architects to experiment afresh with texture colour pattern and topology Though inextricably linked with digital tools and culture Antoine

Picon argues that some significant traits in ornament persist from earlier Western architectural traditions These he defines as the subjective the human interaction that ornament requires in both its production and its reception and the political Contrary to the message conveyed by the founding fathers of modern architecture traditional ornament was not meant only for pleasure It conveyed vital information about the designation of buildings as well as about the rank of their owners As such it participated in the expression of social values hierarchies and order By bringing previous traditions in ornament under scrutiny Picon makes us question the political issues at stake in today s ornamental revival What does it tell us about present day culture Why are we presently so fearful of meaning in architecture Could it be that by steering so vehemently away from symbolism contemporary architecture is evading any explicit contribution to collective values *Turning Points in*
