Multimodal Safety Management and Human Factors José M. Anca Jr, 2017-05-15 Safety management and human factors disciplines are often regarded as subjective and nebulous. This perhaps stems from a variety of sometimes disparate activities in the realms of education, industry and research. Aviation is one of the safety critical industries that has led the development of safety systems and human factors. However, in recent years, safety management and human factors are seen to be progressing well in the road, rail and the medical arena. *Multimodal Safety Management and Human Factors* is a wide ranging compendium of contemporary approaches in the aviation, road, rail and medical domains. It brings together 28 chapters from both the academic and professional worlds that focus on applications, tools and strategies in safety management and human factors. It is a wellspring of the practical rather than the theoretical. Safety scientists, human factors industry practitioners, change management advocates, educators and students will find this book extremely relevant and challenging. **Rock**

Mechanics in Underground Construction C. F. Leung, Yingxin Zhou, 2006 This proceedings volume contains over 300 papers on rock mechanics and engineering with contributors from all over Asia and many other parts of the world. Seven keynote papers summarize the state of the art in rock engineering including topics such as underground rock caverns. The technical papers cover a wide range of rock mechanics and engineering topics: rock tunnels, caverns, mining, rock slopes and dams, rock blasting, rock burst and failure, rock properties, rock mass, rock joints and block theory. Numerous valuable rock engineering case studies are also reported. This volume should serve as a useful reference for the engineers and researchers in rock mechanics and rock engineering. Investigations and Improvement of Ground Conditions Anjan Patel, 2019-01-28 *Geotechnical Investigation and Improvement of Ground Conditions* covers practical information on ground improvement and site investigation considering rock properties and engineering geology and its relation to construction. The book covers geotechnical investigation for construction projects including classic case studies with geotechnical significance. Additional sections cover soil compaction, soil stabilization, drainage and dewatering, grouting methods, the stone column method, geotextiles, fabrics and earth reinforcement, miscellaneous methods and tools for ground improvement, geotechnical investigation for construction projects and forensic geotechnical engineering. Final sections present a series of site specific case studies. Dedicated to ground improvement techniques and geotechnical site investigation. Provides practical guidance on site specific geotechnical investigation and the subsequent interpretation of data. Presents site specific case studies with geotechnical significance. Includes site investigation of soils and rocks. Gives field oriented information and guidance. **Fundamentals of**

Integrated Coastal Management A. Vallega, 2013-06-29 by Elisabeth Mann Borgese Founder and Honorary President International Ocean Institute Adalberto Vallega has been for decades a master and great teacher of integrated coastal management and Mediterranean cooperation This new book of an almost encyclopaedic scope is a most original contribution to the rapidly growing literature on the subject of equal value to the academic community which will greatly appreciate the theoretical historic and philosophical underpinning of the work and to the practitioner the planner regulator and manager who will find in these pages most useful checklists for his duties and responsibilities Vallega perceives the need for Integrated Coastal Area Management ICAM in the broader context of the ongoing third industrial revolution which he calls the trans industrial stage in its interaction with climate change There have been profound changes in the economies of the industrialized countries The development of the new High Technologies including micro electronics genetic engineering new materials has accelerated the transition from an economic system based primarily on production to one based very largely on services This in turn has facilitated globalization of production systems and services including the financial system as well as the migration of people The ongoing global Great Peoples Migration is generally from the hinterland to the coasts where already today over 60 percent of the human population resides exercising unprecedented pressures on the coastal and marine environment Clearly this justifies the current emphasis at global regional and national levels on the need for coastal management
