

# IEEE 829 Documentation

Over the years a number of types of document have been invented to allow for the control of testing. They apply to software testing of all kinds from component testing through to release testing. Every organisation develops these documents themselves and gives them different names, and in some cases confuses their purpose. To provide a common set of standardised documents the IEEE developed the 829 Standard for Software Test Documentation for any type of software testing, including User Acceptance Testing.

This White Paper outlines each of the types of document in this standard and describes how they work together.

## The Types of Document

There are eight document types in the IEEE 829 standard, which can be used in three distinct phases of software testing:

### 1. Preparation Of Tests

- Test Plan: Plan how the testing will proceed.
- Test Design Specification: Decide what needs to be tested.
- Test Case Specification: Create the tests to be run.
- Test Procedure: Describe how the tests are run.
- Test Item Transmittal Report: Specify the items released for testing.

### 2. Running The Tests

- Test Log: Record the details of tests in time order.
- Test Incident Report: Record details of events that need to be investigated.

### 3. Completion of Testing

- Test Summary Report: Summarise and evaluate tests.

## Documentation For Preparation Of Tests

The preparation for testing is the most important part of any software testing project and easily accounts for most of the paper work. The purpose this stage is to prepare an effective and efficient set of tests, and create the environment for them to run in.

### IEEE 829 - Test Plan

The Test Plan is the pivotal document around which all the software testing projects revolve. It describes:

- what has to be done,
- to what quality standard,

Strategy, Planning and Organization of Test Processes Frank Witte, 2022-09-01. The book provides concrete tips for the successful organization of software tests. Because planning and conception in advance are essential for successful test projects, setting the right course prevents problems from the outset and highlights the need for action in software testing. In addition to theoretical basics, this work shows the implementation in practice and deals with typical problems. Frank Witte explains the decisive aspects to be considered in the test concept in order to optimally support and accompany the test process. This book is a translation of the original German 1st edition *Strategie Planung und Organisation von Testprozessen* by Frank Witte, Springer Fachmedien Wiesbaden GmbH, part of Springer Nature, in 2020. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.
