

Membrane Structure and Function POGIL Answer key

Exam 2023

How many different types of molecules are shown in Model 1? - ANSWER two: circle and triangle

Number of triangles and circles on each side of membrane? - ANSWER 14 triangles on left: 0 triangles on right

12 circles on left: 13 circles on right

Which shape is larger? - ANSWER triangle

Describe direction of movement of molecules in Model 1. - ANSWER Random-all directions

Which molecules are able to pass through the semi-permeable membrane? - ANSWER Circles can fit through the gaps due to small size and are nearly equally distributed on both sides of the membrane.

Would you expect the Model 1 system to change over time? - ANSWER No. The triangles will remain on the left side because they are too big to pass through membrane. Circles will remain evenly distributed on both sides due to size and random movement.

What two major types of biological molecules compose the majority of the cell membrane in Model 2? - ANSWER Phospholipids and membrane spanning proteins.

How many different protein molecules are found in Model 2? - ANSWER Four. Two small surface proteins and 2 membrane spanning proteins.

What is the difference between the position of the surface proteins and the membrane-spanning proteins? - ANSWER Surface proteins do not span the cell membrane.

When a carbohydrate chain is attached to a protein, what is the structure called? - ANSWER Glycoprotein; glyco = carbohydrate

When a carbohydrate is attached to a phospholipid, what is the structure called? - ANSWER Glycolipid

Membrane Structure and Function E. Edward Bittar, 1979 Membrane Structure and Function, Volume 3 EE Bittar (Ed), 1980 *Structure and Function of Biological Membranes* Lawrence I. Rothfield, 2014-06-28

Structure and Function of Biological Membranes explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches. The book is an in depth study of the structure and function of membranes. It is divided into three main parts. The first part provides an overview of the study of the biological membrane at the molecular level. Part II focuses on the detailed description of the overall molecular organization of membranes. The third part covers the relationship of the molecular organization of membranes to specific membrane functions, discusses catalytic membrane proteins, presents the role of membranes in important cellular functions, and looks at the membrane systems in eukaryotic cells. Biochemists, cell physiologists, biologists, researchers, and graduate and postdoctoral students in the field of biology will find the text a good reference material.

The Plant Plasma Membrane Christer Larsson, Ian M. Møller, 2012-12-06

The plasma membrane forms the living barrier between the cell and its surroundings. For this reason, it has a wide range of important functions related to the regulation of the composition of the cell interior and to communication with the cell exterior. The plasma membrane has therefore attracted a lot of research interest. Until the early 1970s, it was only possible to study the plasma membrane *in situ*, its structure e.g. by electron microscopy, and its function e.g. by uptake of radioactively labeled compounds into the intact cell or tissue. The first isolation of plant protoplasts by enzymatic digestion of the cell wall in the early 1970s was an important step forward in that it provided direct access to the outer surface of the plasma membrane. More importantly, T. K. Hodges and R. J. Leonard in 1972 published the description of a method by which a fraction enriched in plasma membranes could be isolated from plant tissues using sucrose gradient centrifugation. As a result, the 1970s saw a leap forward in our understanding of the structure and function of the plasma membrane. In 1981, S. Widell and C. Larsson published the first of a series of papers in which plasma membrane vesicles of high yield and purity were isolated from a wide range of plant tissues using aqueous polymer two phase partitioning.

Membrane Structure and Function, Volume 4 EE Bittar (Ed), 1981 **Membrane Biophysics** Hongda Wang, Guohui Li, 2017-11-21

This book highlights recent advances in and diverse techniques for exploring the plasma membrane's structure and function. It starts with two chapters reviewing the history of membrane research and listing recent advances regarding membrane structure, such as the semi-mosaic model for red blood cell membranes and the protein layer lipid-protein island model for nucleated tissue cell membranes. It subsequently focuses on the localization and interactions of membrane components, dynamic processes of membrane transport, and transmembrane signal transduction. Classic and cutting edge techniques e.g. high resolution atomic force microscopy and super resolution fluorescence microscopy used in biophysics and chemistry are presented in a very comprehensive manner, making them useful and accessible to both researchers in the field and novices studying cell

membranes This book provides readers a deeper understanding of the plasma membrane s organization at the single molecule level and opens a new way to reveal the relationship between the membrane s structure and functions making it essential reading for researchers in various fields *Mammalian Cell Membranes* G.
