Asteroids Viorel Badescu, 2013-07-03 The Earth has limited material and energy resources while these resources in space are virtually unlimited Further development of humanity will require going beyond our planet and exploring of extraterrestrial resources and sources of unlimited power Thus far all missions to asteroids have been motivated by scientific exploration However given recent advancements in various space technologies mining asteroids for resources is becoming ever more feasible A significant portion of asteroids value is derived from their location the required resources do not need to be lifted at a great expense from the surface of the Earth Resources derived from Asteroid not only can be brought back to Earth but could also be used to sustain human exploration of space and permanent settlements in space This book investigates asteroids prospective energy and material resources It is a collection of topics related to asteroid exploration and utilization It presents past and future technologies and solutions to old problems that could become reality in our life time The book therefore is a great source of condensed information for specialists involved in current and impending asteroid related activities and a good starting point for space researchers inventors technologists and potential investors Written for researchers engineers and businessmen interested in asteroids exploration and exploitation Keywords Asteroids Asteroid exploration Asteroid exploitation Energy sources Space Resources Material Resources In Situ Resource Utilization Mining

Trigo-Rodríguez,2022-03-08 This book describes the complexity of impact hazards associated with asteroids and comets The challenge in this regard lies in the heterogeneous nature of these bodies that endanger our planet which is why we are conducting new experiments to better understand their unique physicochemical properties Several generations of astronomers have tracked and mapped the orbits of asteroids and comets over the past few centuries and telescopic surveys have only begun to discover new interstellar objects In addition cutting edge software allow our computers to combine the orbits of these elusive bodies to study how they evolve over time and seek to match asteroid complexes as fragments of asteroidal and cometary disruptions Impact hazards represent one of the greatest threats to the survival of human beings in the medium term Geological studies show that the stratigraphic record holds clear geological evidence of these rare but transcendental encounters in the history of life on our planet The study and quantification of past catastrophes can give us clues to face future challenges in the form of potential impacts Further it would be illogical to assume that Earth s interaction with space is limited to major impacts Every night Earth is struck by millions of particles and dozens of meteor showers occur around the globe every year The study of lake and ocean sediments reveals the magnitude of the continuous contribution of interplanetary matter reaching Earth roughly 100 000 tons per year Accordingly the goal of this book is to underscore the need for society wide awareness of the dangers associated with asteroid and comet impacts on the basis of scientific evidence and with no intention of sparking alarmism After all we ourselves may only be the fruit of an opportunity given to mammals sixty five million years ago to evolve after the conflagration that would be the downfall of the dinosaurs If we have learned to read Earth s geological history we should consider ourselves a very fortunate species and its teachings should equip us to face this problem The also book emphasizes the role of space missions to gain insights on these bodies particularly describing the relevance of the DART NASA and Hera ESA missions to deflect and study Dimorphos respectively the small satellite of the Didymos binary asteroid *Encyclopedia of Astrobiology* Muriel Gargaud,William M.
