On Human Nature Jonathan H. Turner,2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex

Lost in Dialogue Giovanni Stanghellini,2017 In this book Stanghellini argues that to be human means to be in dialogue with alterity that mental pathology is the outcome of a crisis of one's dialogue with alterity and that care is a method wherein dialogues take place whose aim is to re enact interrupted dialogue with alterity within oneself and with the external world

Sight Unseen Melvyn Goodale,David Milner,2013-06-27 Vision more than any other sense dominates our mental life Our conscious visual experience of the world is so rich and detailed that we can hardly distinguish it from the real thing But as Goodale and Milner make clear in their prize winning book Sight Unseen our visual experience of the world is not all there is to vision Some of the most important things that vision does for us never reach our consciousness at all In this updated and extended new edition Goodale and Milner explore one of the most extraordinary neurological cases of recent years one that profoundly changed scientific views on the visual brain It is the story of Dee Fletcher a young woman who became blind to shape and form as a result of brain damage Dee was left unable to recognize objects or even tell one simple geometric shape from another As events unfolded however Goodale and Milner found that Dee wasn't in fact blind she just didn't know that she could see They showed for example that Dee

could reach out and grasp objects with amazing dexterity despite being unable to perceive their shape size or orientation Taking us on a journey into the unconscious brain the two scientists who made this incredible discovery tell the amazing story of their work and the surprising conclusion they were forced to reach Written to be accessible to students and popular science readers this book is a fascinating illustration of the power of the unconscious mind Women on the Stage in Early Modern France Virginia Scott,2010-07-08 Focusing on actresses in France during the early modern period Virginia Scott examines how the stereotype of the actress has been constructed The study then moves beyond that stereotype to detail the reality of the personal and artistic lives of women on the French stage from the almost unknown Marie Ferr who signed a contract for 12 livres a year in 1545 to perform the antiquailles de Rome or other histories moralities farces and acrobatics in the provinces to the queens of the eighteenth century Paris stage whose adventures have overshadowed their artistic triumphs The book also investigates the ways in which actresses made invaluable contributions to the development of the French theatre in the seventeenth and eighteenth centuries and looks at the afterlives of such women as Armande B jart Marquise Du Parc Charlotte Desmares Adrienne Lecouvreur and Hippolyte Clairon in biographies plays and films **The Mindful Path to Self-Compassion** Christopher Germer,2009-04-28 Buck up Stop feeling sorry for yourself Don t ruin everything When you are anxious sad angry or lonely do you hear this self critical voice What would happen if instead of fighting difficult emotions we accepted them Over his decades of experience as a therapist and mindfulness meditation practitioner Dr Christopher Germer has learned a paradoxical lesson We all want to avoid pain but letting it in and responding compassionately to our own imperfections without judgment or self blame are essential steps on the path to healing This wise and eloquent book illuminates the power of self compassion and offers creative scientifically grounded strategies for putting it into action Free audio downloads of the meditation exercises are available at the author s website www.chrisgermer.com See also The Mindful Self Compassion Workbook by Kristin Neff and Christopher Germer which provides step by step guidance for building mindful self compassion skills and applying them to specific life challenges and Teaching the Mindful Self Compassion Program by Christopher Germer and Kristin Neff for professionals Association for Behavioral and Cognitive Therapies ABCT Self Help Book of Merit **Altruism** Matthieu Ricard,2015-06-02 The author of the international bestseller Happiness makes a passionate case for altruism and why we need it now more than ever In Happiness Matthieu Ricard demonstrated that true happiness is not tied to fleeting moments or sensations but is an enduring state of soul rooted in mindfulness and compassion for others Now he turns his lens from the personal to the global with a rousing argument that altruism genuine concern for the well being of others could be the saving grace of the 21st century It is he believes the vital thread that can answer the main challenges of our time the economy in the short term life satisfaction in the mid term and environment in the long term Ricard s message has been taken up by major economists and thinkers including Dennis Snower Amartya Sen Joseph Stiglitz and George Soros Matthieu Ricard makes a robust and passionate case

for cultivating altruistic love and compassion as the best means for simultaneously benefitting ourselves and our society It s a fresh outlook on an ardent struggle and one that just might make the world a better place *From Neuron to Cognition via Computational Neuroscience* Michael A. Arbib, James J. Bonaiuto, 2016-11-11 A comprehensive integrated and accessible textbook presenting core neuroscientific topics from a computational perspective tracing a path from cells and circuits to behavior and cognition This textbook presents a wide range of subjects in neuroscience from a computational perspective It offers a comprehensive integrated introduction to core topics using computational tools to trace a path from neurons and circuits to behavior and cognition Moreover the chapters show how computational neuroscience methods for modeling the causal interactions underlying neural systems complements empirical research in advancing the understanding of brain and behavior The chapters all by leaders in the field and carefully integrated by the editors cover such subjects as action and motor control neuroplasticity neuromodulation and reinforcement learning vision and language the core of human cognition The book can be used for advanced undergraduate or graduate level courses It presents all necessary background in neuroscience beyond basic facts about neurons and synapses and general ideas about the structure and function of the human brain Students should be familiar with differential equations and probability theory and be able to pick up the basics of programming in MATLAB and or Python Slides exercises and other ancillary materials are freely available online and many of the models described in the chapters are documented in the brain operation database BODB which is also described in a book chapter Contributors Michael A Arbib Joseph Ayers James Bednar Andrej Bicanski James J Bonaiuto Nicolas Brunel Jean Marie Cabelguen Carmen Canavier Angelo Cangelosi Richard P Cooper Carlos R Cortes Nathaniel Daw Paul Dean Peter Ford Dominey Pierre Enel Jean Marc Fellous Stefano Fusi Wulfram Gerstner Frank Grasso Jacqueline A Griego Ziad M Hafed Michael E Hasselmo Auke Ijspeert Stephanie Jones Daniel Kersten Jeremie Knuesel Owen Lewis William W Lytton Tomaso Poggio John Porrill Tony J Prescott John Rinzel Edmund Rolls Jonathan Rubin Nicolas Schweighofer Mohamed A Sherif Malle A Tagamets Paul F M J Verschure Nathan Vierling Claasen Xiao Jing Wang Christopher Williams Ransom Winder Alan L Yuille **The New Evolutionary Sociology** Jonathan Turner, Richard Machalek, 2018-03-09 For decades evolutionary analysis was overlooked or altogether ignored by sociologists Fears and biases persisted nearly a century after Auguste Comte gave the discipline its name as did concerns that its effect would only reduce sociology to another discipline whether biology psychology or economics Worse apprehension that the application of evolutionary theory would encourage heightened perceptions of racism sexism ethnocentrism and reductionism pervaded Turner and Machalek argue instead for a new embrace of biology and evolutionary analysis Sociology from its very beginnings in the early 19th century has always been concerned with the study of evolution particularly the transformation of societies from simple to ever more complex forms By comprehensively reviewing the original ways that sociologists applied evolutionary theory and examining the recent renewal and expansion of these early approaches the authors confront the challenges posed by biology neuroscience and

psychology to distinct evolutionary approaches within sociology. They emerge with key theoretical and methodological discoveries that demonstrate the critical and compelling case for a dramatically enriched sociology that incorporates all forms of comparative evolutionary analysis to its canon and study of sociocultural phenomena.
