AI And Machine Learning In Pharmaceuticals Dr. K. ILANGO, Dr. P. VALENTINA, 2022-11-08 Artificial intelligence AI and machine learning ML have emerged over the last decade as the cutting edge technologies most expected to revolutionise the pharmaceutical R D industry Revolutionary developments in computer technology and the concomitant evaporation of earlier limits on the collection processing of enormous amounts of data are contributing factors Meanwhile the price of developing and delivering new medicines to the market for patients has skyrocketed Despite these challenges the pharmaceutical sector is interested in AI ML methods because of their predictivity automation and the efficiency boost that is projected as a result Over the last 15 20 years ML techniques have been increasingly used in the drug development process Clinical trial design conduct and analysis are the most recent areas of drug research to see beneficial disruption from AI ML Due to the rising dependence on digital technology in the execution of clinical trials the COVID 19 pandemic could further drive the employment of AI ML in clinical trials Getting through the associated buzzwords and noise is crucial as we progress toward a future where AI ML is more integrated into R D Similarly crucial is the acknowledgement that the scientific method is still relevant for concluding evidence By doing so we can better iv evaluate the potential benefits of AI ML in the pharmaceutical industry and make well informed decisions on the best use The purpose of this paper is to clarify important ideas provide examples of their application and provide a well rounded perspective on how to best use AI ML techniques in research and development
