This volume will be a source of interest for

researchers practitioners professors and postgraduate students aimed at updating their knowledge and finding targets for future work in the metacognition arena The Taxonomy of Metacognition Pina Tarricone,2011-02-28 Metacognition is a complex construct which is fundamental to learning Its complex fuzzy and multifaceted nature has often led to its colloquial application in research resulting in studies that fail to identify its theoretical foundation or elements In response to this the research community continues to call for a comprehensive understanding of the construct of metacognition This book is a response to this call for clarity Pina Tarricone provides a theoretical study of the construct of metacognition in terms of psychological theory The first part of the book analyses the relationship between reflection and metacognition and the second part goes on to analyse the construct of metamemory as the foundation of metacognition The third and final part of the book analyses the construct of metacognition to present the final conceptual framework of metacognition and the taxonomy of metacognition This framework builds a picture and a nexus of the construct through visual links to the related concepts that contribute to what is known as metacognition The Taxonomy of Metacognition provides a comprehensive representation and categorisation of all of the terms concepts categories supercategories subcategories and elements of metacognition It clarifies the construct so that researchers and teachers can develop a better understanding of it This important and broad ranging contribution can be applied to many related areas by researchers psychologists teachers and any profession interested in psychological learning processes **Experimental Methods in Neuropsychology** Kenneth Hugdahl,2003 The present volume aims at presenting a selection of new methods and techniques that may have value for clinical neuropsychology There is an increasing interest among clinical neuropsychologists regarding new developments in cognitive neuroscience and experimental psychology This book presents an updated view of recent methodological developments in experimental psychology and clinical neuroscience **Reflective Teaching, Effective Learning** Char Booth,2011 Char Booth introduces a series of concepts that will empower readers at any level of experience to become better designers and presenters as well as building their confidence and satisfaction as library educators Booth outlines a four part framework of instructional literacy which includes reflective practice educational theory teaching technologies and instructional design Book cover Teaching Students to Drive Their Brains Donna Wilson,Marcus Conyers,2016-06-28 Research suggests that metacognition is key to higher student achievement but studies of classroom practice indicate that few students are taught to use metacognition and the supporting cognitive strategies that make learning easier You can teach metacognition to your students so why wouldn t you This book shows you how Metacognition is a tool that helps students unlock their brain s amazing power and take control of their learning Educational researchers and professional developers Donna Wilson and Marcus Conyers have been exploring and using the explicit teaching of metacognition for years and in this book they share a practical way to teach preK 12 students how to drive their brains by promoting the following practices Adopt an optimistic outlook toward learning Set goals Focus their attention Monitor their progress and Engage in

practices that enhance cognitive flexibility Wilson and Conyers explain metacognition and how it equips students to meet today's rigorous education standards They present a unique blend of useful metaphors learning strategies and instructional tips you can use to teach your students to be the boss of their brains Sample lessons show these ideas in a variety of classroom settings and sections on professional practice help you incorporate these tools and share them with colleagues and parents so that you are teaching for and with metacognition

Mathematical Modelling from a Cognitive Perspective

Stanislaw Schukajlow, Gabriele Kaiser, Gloria Stillman, 2025-05-16 This edited volume provides readers with a snapshot of some of the current thinking on mathematical modelling education It focuses on the relationship between cognitive and metacognitive activities and student approaches to attempting to solve real world modelling problems This book presents a focused review of some current thinking and research on mathematical modelling education focusing on the relationship between cognitive and metacognitive activities and secondary student approaches to attempting to solve real world modelling problems The results of the review highlight areas where theoretical constructs are well advanced and point to areas where development and empirical confirmation are required Four empirical studies showcase both qualitative and quantitative studies providing recent findings resulting from a cognitive analysis of student modelling activity in classroom settings or under test conditions Solving of data rich modelling tasks using strategic knowledge about drawing during modelling activities connecting metacognitive individual strategies metacognitive group strategies and modelling competencies and the activation and nurturing of students mathematical thinking during the solution of a design problem are considered The book will be of interest to researchers teachers and teacher educators and curriculum and educational policy writers It was originally published as a special issue of Mathematical Thinking and Learning

Active Learning

Olena Lutsenko, Gregory Lutsenko, 2022-02-09 In the context of globalization changes in educational systems it is important to modify approaches to the educational process and introduce learning technologies that allow for maximum involvement in learning One such technology is the technology of active learning which engages learners through participation in the cognitive process and certain tasks as well as through the collective activities of the subjects of the educational process This book discusses the theoretical analysis of active learning and contains practical recommendations for its implementation

New Science of Learning Myint Swe Khine, Issa M. Saleh, 2010-06-16 The earliest educational software simply transferred print material from the page to the monitor Since then the Internet and other digital media have brought students an ever expanding low cost knowledge base and the opportunity to interact with minds around the globe while running the risk of shortening their attention spans isolating them from interpersonal contact and subjecting them to information overload The New Science of Learning Cognition Computers and Collaboration in Education deftly explores the multiple relationships found among these critical elements in students increasingly complex and multi paced educational experience Starting with instructors insights into the cognitive effects of digital media a diverse range of viewpoints with

little consensus this cutting edge resource acknowledges the double edged potential inherent in computer based education and its role in shaping students thinking capabilities Accordingly the emphasis is on strategies that maximize the strengths and compensate for the negative aspects of digital learning including Group cognition as a foundation for learning Metacognitive control of learning and remembering Higher education course development using open education resources Designing a technology oriented teacher professional development model Supporting student collaboration with digital video tools Teaching and learning through social annotation practices The New Science of Learning Cognition Computers and Collaboration in Education brings emerging challenges and innovative ideas into sharp focus for researchers in educational psychology instructional design education technologies and the learning sciences

Collaborative Learning in a Global World Miri Shonfeld, David Gibson, 2018-11-01 The 21st century has brought about changes in every aspect of life through ubiquitous technology and Internet based social media The distances between cultures and continents have narrowed the world has become flat and multicultural work teams composed of members from different countries have become a daily reality in global businesses However in many ways these global changes in work practices have only just begun to have an impact on education To better prepare students for the information age researchers and policy makers largely agree about the skills needed for shared knowledge construction Indeed the education systems in several different countries have begun to integrate these skills into teaching and learning and are placing a strong emphasis on their implementation Melamed et al 2010 Resta et al 2011 In 2015 the OECD PISA exam for the first time included assessment of collaborative problem solving in its country by country comparison Collaborative learning is not a trivial challenge nor is it intuitive for all teachers and learners One must acquire and practice the essential skills in order to successfully work in a team Consequently it is essential to train teachers in collaborative teamwork as they must serve as role models for students In addition new tools and practices become available at a rate that outpaces the abilities of many higher education institutions to adopt and implement This book surveys the current state of the field and provides theoretical guidance and practical examples to help meet the gaps in research development and practice

language **Students with Both Gifts and Learning Disabilities** Tina A. Newman, Robert J. Sternberg, 2012-12-06 We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading writing or math but who could solve seemingly any problem with computers or build the most intricate structures with Legos or could draw beautiful pictures or could tell the most creative stories but ended up in tears when asked to write it out How is it possible to have so much talent in some areas and yet to appear to have a disability in another What resources are available for these students How can we ensure that these students abilities are nurtured and developed Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers We have ourselves been addressing related questions for some time Our group at the PACE Center at Yale has explored the development of abilities competencies and expertise that allow people to be successful in life Through this work we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is traditionally thought of as intelligence We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones and often not even the most important ones that allow people to be successful in the world
