Mineral Mapping And Applications Of Imaging Spectroscopy Wur:

Imaging Spectrometry Freek D. van der Meer, S.M. de Jong, 2011-03-29 A significant step forward in the world of earth observation was made with the development of imaging spectrometry. Imaging spectrometers measure reflected solar radiance from the earth in many narrow spectral bands. Such a spectroscopical imaging system is capable of detecting subtle absorption bands in the reflectance spectra and measure the reflectance spectra of various objects with a very high accuracy. As a result, imaging spectrometry enables a better identification of objects at the earth surface and a better quantification of the object properties than can be achieved by traditional earth observation sensors such as Landsat TM and SPOT. The various chapters in the book present the concepts of imaging spectrometry by discussing the underlying physics and the analytical image processing techniques. The second part of the book presents in detail a wide variety of applications of these new techniques ranging from mineral identification, mapping of expansive soils, land degradation, agricultural crops, natural vegetation, and surface water quality. Management and Development of Agricultural and Natural Resources in Egypt's Desert Ahmed A. Elkhoully, Abdelazim Negm, 2021-05-31 This book reviews the economic potential of various natural resources found in the Egyptian deserts that could help fill the food gap in Egypt, e.g. the date palm, olives, and domestic animals. Bearing in mind that the entire country is subject to arid or hyperarid climatic conditions, only a small portion (3% of total area) is agriculturally productive, in comparison to the dominant deserts. These aspects combined with a growing population (ca. 100 million citizens) and water resources scarcity have produced severe adverse effects on natural resource utilization. This book presents innovative methods for addressing desert soil's key problems: soil erosion, salinity, pollution, decreased fertility, minerals, and weed and pest control. Its goal is to help authorities reclaim the desert and optimally utilize the minerals and the available natural resources to support the sustainability agenda 2030. Besides, it offers researchers guidance on remaining gaps and future research directions. Lastly, and importantly, it provides essential information on investment opportunities in desert cultivation, such as the fields of food, fodder, and medicinal plants.

Remote Sensing of Soil Salinization Dr. Graciela Metternicht, Dr. Alfred Zinck, 2008-12-12 Recognized and advocated as a powerful tool, the role of remote sensing in identifying, mapping, and monitoring soil salinity and salinization will continue to expand. *Remote Sensing of Soil Salinization: Impact on Land Management* delineates how to combine science and geospatial technologies for smart environmental management. Remote Sensing in Soil Science M.A. Mulders,1987-05-01 This book provides comprehensive coverage of remote sensing techniques and their application in soil science A clear step by step approach to the various aspects ensures that the reader will gain a good grasp of the subject so that he can apply the techniques to his own field of study The book opens with a thorough introduction to the physical aspects of electromagnetic radiation and the technical aspects of remote sensing and image processing This is followed by a discussion of the methods for interpreting remote sensing data and their application to soils vegetation and land as a whole As the interpretation of soil conditions is based on many aspects i e soil surface vegetation land use land form the scope of the book is correspondingly broad It will therefore provide much useful information for students and scientists in soil science geography geology hydrology ecology agriculture and civil engineering

International Congress,European Society for Soil Conservation,1994 Environmental degradation in Europe is attracting increasing concern especially from farmers scientists and policy makers This book a collection of refereed papers from the First International Congress of the European Society for Soil Conservation covers the assessment prediction and modelling of soil degradation and the strategies used to combat the problem The current status of soil degradation is reported at both national and local

levels and is related to natural processes such as desertification or to mismanagement of the environment through agricultural or industrial activities The consequences of soil degradation include loss of soil fertility and nutrients declining land productivity and the detrimental effects of sediment and associated contaminants on water quality There are critiques of the traditional methodologies used in soil erosion research including the use of erodibility and erosivity indices rainfall simulation and experimental erosion plots Other technologies such as geographical information systems and remote sensing are also applied to the study of degradation processes As well as chapters concerned with existing soil erosion models a new European Soil Erosion Model EUROSEM is described and tested The diverse nature of conservation measures currently used in Europe is presented ranging from evaluation of traditional methods such as bench terracing and the use of vegetation through to novel products such as soil conditioners and geotextiles The book includes contributions from many European soil scientists geographers and environmental scientists and will interest readers in these disciplines Physics Briefs ,1993
