## Student Exploration: Determining Density via Water Displacement

**Essential** understandings: principles, density displacement; deeper, volume

**Prize Knowledge** Questions: How do we determine the volume of an object?

- What happens when we place an object in water?
- How does the volume of the object change when it is placed in water?

- How do we determine the volume of an object?

**Volume** is the amount of space an object takes up.

When you place an object in water, it displaces a volume of water. The volume of water displaced is equal to the volume of the object. This is called **displacement**. In other words, the volume of water displaced is equal to the volume of the object.

The relationship between the volume of an object and the volume of water it displaces is called **density**. Density is mass per unit volume. It is calculated by dividing the mass of an object by its volume.

- What is the volume of the object? (100 mL - 80 mL = 20 mL)
- What is the mass of the object? (100 g - 80 g = 20 g)
- What is the density of the object? (20 g / 20 mL = 1 g/mL)

**Answer:** The density of the object is 1 g/mL, which is the same as the density of water.
