Monsters and Monstrosity Daniela Carpi, 2019-06-17 Every culture knows the phenomenon of monsters terrifying creatures that represent complete alterity and challenge every basic notion of self and identity within a cultural paradigm In Latin and Greek culture the monster was created as a marvel appearing as something which like transgression itself did not belong to the assumed natural order of things Therefore it could only be created by a divinity responsible for its creation composition goals and stability but it was triggered by some in or non human action performed by humans The identification of something as monstrous denotes its place outside and beyond social norms and values The monster evoking transgression is most often indistinguishable from reactions to the experience of otherness merging the limits of humanity with the limits of a given culture The topic entails a large intersection among the cultural domains of law literature philosophy anthropology and technology Monstrosity has indeed become a necessary condition of our existence in the 21st century it serves as a representation of change itself In the process of analysis there are three theoretical approaches psychoanalytical representational ontological The volume therefore aims at examining the concept of monstrosity from three main perspectives technophobic xenophobic superdiversity Today s globalized world is shaped in the unprecedented phenomenon of international migration The resistance to this phenomenon causes the demonization of the Other seen as the antagonist and the monster The monster becomes therefore the ethnic Other the alien To reach this new perspective on monstrosity we must start by examining the many facets of monstrosity also diachronically from the philological origin of the term to the Roman and classical viewpoint from the Renaissance medical perspective to the religious background from the new filmic exploitations in the 20th and 21st centuries to the very recent ethnological and anthropological points of view to the latest technological perspective dealing with artificial intelligence

(Liton) Kamruzzaman,2019-04-30 The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene Climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible While there is a vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities Moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond The current global school strikes for climate action known as Fridays for Future evidences this The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide This book fills a gap in the literature by bringing together issues related to

the planning development and management of cities and focusing on a triple bottom line approach to sustainability
