Interface Branden Hookway, 2014-04-04 A cultural theory of the interface as a relation that is both ubiquitous and elusive drawing on disciplines from cultural theory to architecture In this book Branden Hookway considers the interface not as technology but as a form of relationship with technology The interface Hookway proposes is at once ubiquitous and hidden from view It is both the bottleneck through which our relationship to technology must pass and a productive encounter embedded within the use of technology It is a site of contestation between human and machine between the material and the social between the political and the technological that both defines and elides differences A virtuoso in multiple disciplines Hookway offers a theory of the interface that draws on cultural theory political theory philosophy art architecture new media and the history of science and technology He argues that the theoretical mechanism of the interface offers a powerful approach to questions of the human relationship to technology Hookway finds the origin of the term interface in nineteenth century fluid dynamics and traces its migration to thermodynamics information theory and cybernetics He discusses issues of subject formation agency power and control within contexts that include technology politics and the social role of games He considers the technological augmentation of humans and the human machine system discussing notions of embodied intelligence Hookway views the figure of the subject as both receiver and active producer in processes of subjectification The interface he argues stands in a relation both alien and intimate vertiginous and orienting to those who cross its threshold

Code-Switching in Computer-Mediated Communication Hanna Devic,2008-08-14 Inhaltsangabe Introduction It has now been about a decade and a half since the Internet and the World Wide Web have come to represent a major realm of research in various fields of linguistics This is of course largely due to the fact that they offer easy access to a massive and unlimited amount of language data which do not have to be transcribed in arduous ways as is the case with speech recordings However alongside this major cause of attraction and despite the overall dominance of English it is also the multilingual nature of the Internet which has naturally sparked the interest of bilingualism research as well as language contact research It is the choice of and the switching between the available codes of the users repertoires which mark a major topic of interest and which shall be explored in the thesis at hand The final focus of investigation will be the communicative functions and meanings of the phenomenon called code switching CS as it naturally occurs in a Canadian Croatian discussion forum In order to prepare the theoretical ground

for the analysis of my own corpus of computer mediated communication CMC data the first part of this research thesis will define the subject matter and the origins of research into it and a general overview of the classic linguistic treatment of the phenomenon will be given Following this paper will illustrate the major concepts and approaches relevant to the final purpose of the thesis and point out potential critique of their assumptions In order to establish a link between code switching phenomena in general and their communicative setting in the conducted study the subsequent chapter will address several issues in computer mediated communication research Thereafter a review of renowned studies of code switching phenomena in computer mediated communication will be provided Finally the Croworld corpus including its compilation and structure and the backgrounds of the users involved will be presented My subsequent analysis of selected forum posts will aim to relate the tenets of the classic approaches as well as the insights of the CMC studies regarding the significance of code switching practices
