Abstract

In recent years, the use of new technologies in educational systems has increased worldwide as digital cameras, personal computers, scanners, and easy-to-use software have become available to educators to harness the digital world. The impact of new technologies in educational contexts has been mostly positive as new technologies have given educators the opportunity to enhance their knowledge, skills, and therefore enhance the standard of education. Researchers have found that student engagement, achievement and motivation are enhanced through integration of such technologies. However, education systems still face many challenges: one of these challenges is how to enhance student engagement to provide better educational outcomes. It has become increasingly important to use innovative pedagogical models to engage learners. Digital storytelling is one of the innovative pedagogical approaches that can engage students in deep and meaningful learning. This research project aimed to create a constructivist learning environment with digital storytelling. The research investigated the pedagogical aspects of digital storytelling and the impact of digital storytelling on student learning when teachers and students use digital stories. A multi-site case study was conducted in one Australian school at primary and secondary levels. In selected classrooms, students and teachers had the opportunity to engage in innovative learning experiences based on digital storytelling. In order to enhance the reliability and validity of the research, multiple methods of data collection and analysis were used. Data was collected with qualitative and quantitative methods. An evaluation rubric was used to collect quantitative data, while interviews and observation were used to collect qualitative data. Data collection was guided by a mixed methods research design in order to evaluate if and how digital storytelling enhances teaching and learning outcomes. The findings from this study suggest that digital storytelling is a powerful tool to integrate instructional messages with learning activities to create more engaging and exciting learning environments. It is a meaningful approach for creating a constructivist learning environment based on novel principles of teaching and learning. Thus, this approach has the potential to enhance student engagement and provide better educational outcomes for learners.

New Perspectives on the Development of Communicative and Related Competence in Foreign Language Education Izumi Walker, Daniel Kwang Guan Chan, Masanori Nagami, Claire Bourguignon, 2018-08-21

Nearly half a century has passed since Hymes proposed the concept of communicative competence to describe the knowledge and skills required for the appropriate use of language in a social context. During these decades, a number of scholars have applied and refined this concept. In language education, communicative competence has been identified as a major objective of learning. This book will inform readers about communicative competence as a highly complex construct encompassing an array of sub-competencies such as linguistic skills and proficiencies, knowledge of socio-cultural and socio-pragmatic codes, and the ability to engage in textual and conversational discourse. Findings from research in related disciplines have pointed to the significance of factors that can contribute to the attainment of communicative competence. Various teaching practices and relevant Information and Communication Technology (ICT) tools will be also introduced and discussed to achieve communicative competence as a complex ability. It is a timely contribution to current research on key areas in the teaching, learning, and acquisition of second foreign languages.

Teaching Languages with Technology Euline Cutrim Schmid, Shona Whyte, 2014-11-03

This book draws on theories of second language acquisition (SLA) to illustrate how interactive white board technology can be exploited to support language acquisition. It examines interaction, collaboration, and negotiation of meaning and focus on form in the communicative language classroom in primary, secondary, and vocational schools. In recent years, new technologies have been incorporated into second and foreign language education as tools for implementing teaching methodologies. IWBs have established their role in the field of computer-assisted language learning (CALL) and are an effective and inspiring tool which motivates both teachers and learners. Although the number of IWBs in classrooms has rapidly increased over the past decade in many parts of the world, teacher training materials and pedagogical support for the design, evaluation, and implementation of IWB-based materials in the foreign language classroom has not kept pace. Research also shows that language teachers do not always use IWBs in pedagogically sound ways. There is a real need for the development of training models and examples of good practice which can support teachers in developing the necessary competencies for exploiting the IWB in ways consistent with current theories of language teaching pedagogy. This book provides that best practice and gives a full account of in-depth research in an accessible manner.
