

Diode Circuit Analysis: Basics

V and R may represent the Thévenin equivalent of a more complex 2-terminal network. The objective of diode circuit analysis is to find the **quiescent operating point** for the diode.

Q-Point = (I_D, V_D)

The loop equation for the diode circuit is:

$$V - I_D R - V_D = 0$$

This is also called the **load line** for the diode. The solution to this equation can be found by:

- Graphical analysis using the load-line method.
- Analysis with the diode's mathematical model.
- Simplified analysis with the ideal diode model.
- Simplified analysis using the constant voltage drop (CVD) model.
