How Mocvd Aixtron:

Recent Developments in Superconductivity Research Barry P. Martins, 2007 Superconductivity is the ability of certain materials to conduct electrical current with no resistance and extremely low losses High temperature superconductors such as $\text{La}_{2-x}\text{Sr}_x\text{CuO}_x$ T_c 40K and $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ T_c 90K were discovered in 1987 and have been actively studied since In spite of an intense world wide research effort during this time a complete understanding of the copper oxide cuprate materials is still lacking Many fundamental questions are unanswered particularly the mechanism by which high T_c superconductivity occurs More broadly the cuprates are in a class of solids with strong electron electron interactions An understanding of such strongly correlated solids is perhaps the major unsolved problem of condensed matter physics with over ten thousand researchers working on this topic High T_c superconductors also have significant potential for applications in technologies ranging from electric power generation and transmission to digital electronics This ability to carry large amounts of current can be applied to electric power devices such as motors and generators and to electricity transmission in power lines For example superconductors can carry as much as 100 times the amount of electricity of ordinary copper or aluminium wires of the same size Many universities research institutes and companies are working to develop high T_c superconductivity applications and considerable progress has been made This volume brings together new leading edge research in the field

The Chinese Information War Dennis F. Poindexter, 2018-06-21 China's information war against the United States is clever technically broadly applied and successful The intelligence community in the U S has publicly stated this is a kind of war we do not know how to fight yet it is the U S military that developed and expanded the doctrine of information war In fact the U S military is at a disadvantage because it is part of a democratic decentralized system of government that separates the state from commercial business

China's political systems are more easily adapted to this form of warfare as their recent land seizures in the South China Sea demonstrate. We call this annexation when it is a new form of conquest.
