There is a need to develop identification technique for post larvae and juvenile of prawn shrimp which is easy and reliable. Such a technique would be useful for studying genetic variations of wild populations and in brood stock selection for intensive farming. In this book identification of major commercially important species is done from Mysis Post larvae stages as well as adults. Identification using carapace and how to identify prawn shrimp in field are also given. Identification of Mysis and post larvae are given using drawings of antennae, mandibles, maxillae, maxilliped, uropod and telson with their description. Identification of adults are given with their classification, scientific name, common name, distinguish characters, colour, maximum size, their distribution and drawings of species, petasma and thylecum. In some cases photographs and comparative characters of nearer species are also given. The subject is explained with the help of 535 drawings, colour photographs and 30 tables. In this book identification of 78 Marine water prawn and 28 freshwater shrimps totaling 106 prawn and shrimp species are given. The subject of the book is justified using more than 90 references.
