Edited By Robert Trivers:

Digit Ratio John T. Manning, 2002 Manning biological sciences University of Liverpool argues that the relative lengths of the second and fourth fingers are genetically linked to hormone and sex related traits and by extension with sperm counts family size musical genius sporting prowess autism depression homosexuality heart problems and breast cancer He suggests that the study of the ratio between the lengths of the second and fourth finger can broaden our understanding of human ability behavior and health Three photographs 38 figures and eight tables are included Annotation copyrighted by Book News Inc Portland OR American Scientist, 2002 Digit Ratio John T. Manning, 2002 **Offspring** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel for the Workshop on the Biodemography of Fertility and Family Behavior, 2003-05-04 Despite recent advances in our understanding of the genetic basis of human behavior little of this work has penetrated into formal demography Very few demographers worry about how biological processes might affect voluntary behavior choices that have demographic consequences even though behavioral geneticists have documented genetics effects on variables such as parenting and divorce *Offspring Human Fertility Behavior in Demographic Perspective* brings together leading researchers from a wide variety of disciplines to review the state of research in this emerging field and to identify promising research directions for the future *The Biodemography of Human Reproduction and Fertility* Joseph Rodgers, Hans-Peter Kohler, 2002-09-30 The book that you hold in your hands is the second in a series The two titles in the series are the following *Genetic Influences on Human Fertility and Sexuality Theoretical and Empirical Contributions from the Biological and Behavior Sciences* Edited by Joseph Lee Rodgers David C Rowe Warren B Miller Published by Kluwer Academic Press 2000 *The Biodemography of Human Reproduction and Fertility* Edited by Joseph Lee Rodgers Hans Peter Kohler Published by Kluwer Academic Press 2002 The series has published chapters by researchers who study human fertility from a particular perspective Biodemography We welcome your interest and participation in this developing subfield Or perhaps biodemography may be better referred to as a superfield Because biodemography so naturally crosses interdisciplinary boundaries and because its application draws together researchers from disparate disciplines it may well be more appropriate to consider that biodemography subsumes a number of other disciplines rather than the other way around In this preface we will describe our own efforts and those of many others to promote and develop the study of human fertility using methods models and theories from both biological and demographic domains In December 1997 25 participants from three different countries gathered in Tucson Arizona for a small conference with the title *Genetic Influences on Fertility Related Processes* That conference represented a fascinating blending of research from two apparently separate domains **Analyzing Contemporary Fertility** Robert Schoen, 2020-08-12 This edited volume offers state of the art research on the dynamics of contemporary fertility by examining the implications of the economic and social

forces that are driving the rapid change in fertility behavior and the changing context determinants and measurement of contemporary human reproduction The volume explores new theoretical avenues that seek to incorporate uncertainty examine social contagion effects and explain the rise in childlessness Reproductive attitudes are re examined in chapters that deal with models of parenthood and with the persistence of race ethnic nativity differences A new and important subject of multi partner fertility is also described by examining it in the context of total fertility and from the usually neglected perspective of men The impact of divorce on fertility the measurement of childlessness and the postponement of first births developments in assortative mating and fertility and current patterns of interracial fertility are also addressed in this volume By combining up to date research spanning the entire field to illuminate contemporary developments the book is a valuable source for demographers sociologists economists and all those interested in understanding fertility in today s world The Evolution of Man ,1909 **Evolutionary Perspectives on Human Reproductive Behavior** Dori LeCroy,Peter Moller,2000

A central aspect of human adaptation reproductive behaviour is studied through the multiple lenses of philosophy biology psychology and anthropology all united by an evolutionary perspective Although reproduction is an intrinsic mechanism of evolution this colloquium shows that reproductive behaviours yield new significance for evolution theory when re examined in a multidisciplinary setting This volume focuses on explication of the adaptive evolved nature of our own reproduction with topics such as how mate choice shaped human nature symmetry in mate selection the evolution of moral dispositions and the sexist order of the bonobos This look at reproduction as a mechanism of human evolution reveals underlying physiologic mechanisms as well as comparative and interesting cross cultural aspects that emerge from social sciences and anthropology

Dynamics of Human Reproduction James W. Wood,2017 Awarded the W W Howells Award for the Outstanding Book in Biological Anthropology this volume presents a comprehensive integrated and up to date overview of the major physiological and behavioral factors affecting human reproduction In attempting to identify the most important causes of variation in fertility within and among human populations Wood summarizes data from a wide range of societies Trained as an anthropologist as well as a demographer he devotes special attention to so called natural fertility populations in which modern contraceptives and induced abortion are not used to limit reproductive output Such an emphasis enables him to study the interaction of biology and behavior with particular clarity The volume weaves together the physiological demographic and biometric approaches to human fertility in a way that will encourage future interdisciplinary research Instead of offering a general overview the focus is to answer one question Why does fertility and the number of live births vary from couple to couple within any particular population and from population to population across the human species as a whole Topics covered include ovarian function conception and pregnancy intrauterine mortality reproductive maturation and senescence coital frequency and the waiting time to conception marriage patterns and the initiation of reproduction the fertility reducing effects of breastfeeding the impact of maternal nutrition on reproduction and reproductive seasonality This

unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate level textbook and as a reference work Provided by publisher

Reproductive Ecology and Human Evolution Peter Thorpe Ellison, 2001 The study of human reproductive ecology represents an important new development in human evolutionary biology Its focus is on the physiology of human reproduction and evidence of adaptation and hence the action of natural selection in that domain But at the same time the study of human reproductive ecology provides an important perspective on the historical process of human evolution a lens through which we may view the forces that have shaped us as a species In the end all actions of natural selection can be reduced to variation in the reproductive success of individuals Peter Ellison is one of the pioneers in the fast growing area of reproductive ecology He has collected for this volume the research of thirty one of the most active and influential scientists in the field Thanks to recent noninvasive techniques these contributors can present direct empirical data on the effect of a broad array of ecological behavioral and constitutional variables on the reproductive processes of humans as well as wild primates Because biological evolution is cumulative however organisms in the present must be viewed as products of the selective forces of past environments The study of adaptation thus often involves inferences about formative ecological relationships that may no longer exist or not in the same form Making such inferences depends on carefully weighing a broad range of evidence drawn from studies of contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism's contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with demography medicine social anthropology and public health Peter T Ellison is professor of anthropology and dean of the Graduate School of the Arts and Sciences at Harvard University He is the author of *On Fertile Ground* and numerous papers in scientific journals that have made leading contributions to the field of reproductive ecology

The Descent of Man, and Selection in Relation to Sex Volume 1 Charles Darwin, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1872 edition Excerpt been important they would long ago have been either fixed and preserved or eliminated In this respect man resembles those forms called by naturalists protean or polymorphic which have remained extremely variable owing as it seems to their variations being of an indifferent nature and consequently to their having escaped the action of natural selection We have thus far been baffled in all our attempts to account for the differences between the races of man but there remains one important agency namely Sexual Selection which appears to have acted as powerfully on man as on many other animals I do not intend to assert that sexual selection will account for all the differences between the races An unexplained residuum is left about

which we can in our ignorance only say that as individuals are continually born with for instance heads a little rounder or narrower and with noses a little longer or shorter such slight differences might become fixed and uniform if the unknown agencies which induced them were to act in a more constant manner aided by long continued intercrossing Such modifications come under the provisional class alluded to in our fourth chapter which for the want of a better term have been called spontaneous variations Nor do I pretend that the effects of sexual selection can be indicated with scientific precision but it can be shown that it would be an inexplicable fact if man had not been modified by this agency which has acted so powerfully on innumerable animals both high and low in the scale It can further be shown that the differences between the races of man as in color hairiness form of features etc are of the nature which it might have been expected would have been acted on by The Population Problem Alexander Morris Carr-Saunders, 1922
