 Energy is energy generated from natural resources such as sunlight wind rain tides and geothermal heat which are naturally
 replenished In 2008 about 18% of global final energy consumption came from renewables with 13% coming from traditional
 biomass such as wood burning Hydroelectricity was the next largest renewable source providing 3% 15% of global electricity
 generation followed by solar hot water heating which contributed with 1 3% Modern technologies such as geothermal energy
 wind power solar power and ocean energy together provided some 0 8% of final energy consumption The book provides a
 forum for dissemination and exchange of up to date scientific information on theoretical generic and applied areas of
