### ABSTRACT

Architectural philosophy can be defined as a set of ideas, theories or concepts that governed the work of architecture with architects incessantly seek to create new concepts or thoughts in defining architecture. It is completely debatable to postulate that architectural excellence has indebted itself to architectural philosophy, but evidently, many eminent architects across the history and geography upheld philosophy as their main design apparatus. Contrastingly, there are problems recognized as in the bracket of architecture and philosophy where architects in Malaysia are treated as patrons' and decision makers' architectural 'prostitute'. On the other hand, there is a lack of publications and documentation done that encompasses Malaysia architectural scene. The main concern of this research is to review how local architects develop their philosophy since there are really no studies made by past scholars that systematically scrutinize, compile and document in depth the philosophy of Malaysian contemporary architects and the mechanism involved in developing architectural philosophy. With this in mind, Architect Razin Mahmood, an award-winning Johor Bahru-based architect has been selected as main case study, with interview and documentation as main research tactics. By extrapolating the variables found in eminent architect's philosophical development as a theoretical starting point, local architect is interviewed accordingly. Subsequently, the data gained is analyzed and reviewed as a model of architect philosophical development. At the end of this paper, we learned that architect develops philosophies progressively, with a typified matrix of personality and is inspired by their surroundings.

## 1. Introduction

Over the last century, the world has seen numerous architectural ideologies, theories and manifestoes being propagated by the modern movement in the search of an absolute architectural epitome, which turned out to be a paradox by it, and in succession sparked an eternal debate and surges of polemics and counteract ideologies. The Modern movement's central fixation towards rationalism and physical aesthetics had no room for humanistic approach within their frame of reference. Malaysia, being a third world and a post-second world war country has also been slightly affected by these movements and invasive architecture that have been descended from respective nation's colonizer, pre-dating independence. Endut (1993) suggested, Malaysia in the last half century have experienced and undergone significant amount of changes, as far as built environment and the search of national architectural identities are still ongoing. Buildings with multi-faceted images are erected almost every day, in the wake of the so-called 'Wawasan 2020', a dictum posited and vowed an optimistic imagery of a 'futuristic' developed nation, for a better living environment.

Globally since the late 70's and 80's, due to the growth of Post-Modernism, there has been a dynamic shift of designers towards symbolic aesthetics and social concerns (Costing, 2007; Lawson, 2005). This has subsequently led to new interests in paradigm of

designing with theories, a new way of response to the built environment. Peter Eisenman in late twentieth century has earned so much respect with formulating new theories in architecture – so much as his fellow architect Philip Johnson (2012) said, "Peter Eisenman is an architect who needs theories just like Mies Van Der Rohe needed technology". Eisenman has also been persistently likened to that of Le Corbusier, in formulating avant-garde theories. Eisenman, with his 'Cardboard Architecture' of 1972 and his works, shows that theory can keep architecture honest as well as inventive – an antithesis to the idea of the modernists who succumb to the comfort of the industry (Ansari, 2013; Jencks & Kropf, 2006). Elsewhere, Frank Gehry in the 90's has shook the world with his architectural-philosophical sensation deemed as 'The Bilbao Effect' (Frampton, 1985; Rautenberg, 2012), in relating to his Bilbao Guggenheim Museum widely acclaimed architectural icon that immediately elevated the economical, social and infrastructural quality of Bilbao city in dramatic contrast. Of course, it is totally nothing novel, recalling the 1977 Georges Pompidou Center in France by then the young Renzo Piano and Richard Rogers which exemplified similar radical approaches; as well as some notable buildings by the modernists not to say the least. But then, it was the Bilbao Guggenheim Museum that became the savior of architects as opined by Rautenberg (2012), reifying the status quo of that 1920's modernist's ideology of revolution – architecture that can save the world. From both game-changing occasions, a new design trait has been established – that Jencks & Kropf (2006) believed more academic
