

## WHAT IS TECHNOLOGY?

An example of defining technology in a too narrow manner is the common contemporary tendency to mean by "technology" solely computers and cell phones, leaving out all of machine technology, let alone other technology. A case of defining technology in a manner that may be too broad is B. F. Skinner's inclusion of all human activity in technology. Skinner understands human activity as being conditioned and self-conditioning. For Skinner conditioning is considered to be behavioral technology. A related move is the general inclusion of "psychological technology" as part of the motivational apparatus of technological activities, such as chanting in hunter-gatherer societies, or various political beliefs in industrial societies (propagated by propaganda, understood as a kind of technology by Ellul), thereby erasing the distinction between technology and culture by including *all* of culture within technology (see below on Jarvie).

### Definitions of Technology

Three definitions or characterizations of technology are: (a) technology as hardware; (b) technology as rules; and (c) technology as system.

#### Technology as hardware

Probably the most obvious definition of technology is as tools and machines. Generally the imagery used to illustrate a brochure or flier on technology is that of things such as rockets, power plants, computers, and factories. The understanding of technology as tools or machines is concrete and easily graspable. It lies behind much discussion of technology even when not made explicit. (Lewis Mumford (1895–1990) made a distinction between tools and machines in which the user directly manipulates tools, while machines are more independent of the skill of the user.)

One problem for the definition of technology as tools or machines is cases where technology is claimed not to use either tools or machines. One such non-hardware technology is the behavioral technology of the psychologist B. F. Skinner (1904–90). If one considers verbal or interpersonal manipulation or direction of the behavior of another as technology then it appears we have technology without tools. Mumford claims that the earliest "machine" in human history was the organization of large numbers of people for manual labor in moving earth for dams or irrigation projects in the earliest civilizations, such as Egypt, ancient Sumer in Iraq, or ancient China. Mumford calls

## **Philosophy Of Technology An Introduction:**

**Philosophy of Technology** Maarten J Verkerk, Jan Hoogland, Jan van der Stoep, Marc J. de Vries, 2015-09-16 Philosophy of Technology An introduction for technology and business students is an accessible guide to technology's changes, their ubiquitousness, and the many questions these raise. Designed for those with no philosophical background in mind, it is ideal for technology and engineering students or specialists who want to learn to think critically about how their work influences society and our daily lives. The technological business environment and daily experiences are the starting point of the book, and the authors reflect upon these practices from a philosophical point of view. The text goes on to present a critical analysis of the subject, including development, manufacturing, sales, and marketing, and the use of technological products and services. The abstract ideas are made easier to grasp with a story-telling approach, a vivid history of the discipline, and colourful portraits of the core thinkers in this domain, as well as four case studies drawing from various engineering disciplines to demonstrate how philosophy can and should influence technology in practice. The first comprehensive introduction to this vibrant young sub-discipline in over 20 years, this is an ideal textbook for students of technology and engineering beginning a course or project in the philosophy of their subject.

**Teaching about Technology** Marc J. de Vries, 2005-08-17 Teaching about technology at all levels of education can only be done properly when those who teach have a clear idea about what it is that they teach. In other words, they should be able to give a decent answer to the question: what is technology? In the philosophy of technology, that question is explored. Therefore, the philosophy of technology is a discipline with a high relevance for those who teach about technology. Literature in this field, though, is not always easy to access for non-philosophers. This book provides an introduction to the philosophy of technology for such people. It offers a survey of the current state of affairs in the philosophy of technology and also discusses the relevance of that for teaching about technology. The book can be used in introductory courses on the philosophy of technology in teacher education programs, engineering education programs, and by individual educators that are interested in the intriguing phenomenon of technology that is so important in our contemporary society.
