Systematisch variierte Kontextaufgaben und ihr Einfluss auf kognitive und affektive Schülerfaktoren Sebastian Habig, 2017 Die Einbettung naturwissenschaftlicher Fachinhalte in lebensweltbezogene Kontexte ist mit dem Ziel verbunden das Interesse von Schülerinnen und Schülern am naturwissenschaftlichen Unterricht zu fördern Obwohl zahlreiche Studien bereits interessensförderliche Effekte der Kontextorientierung nachweisen konnten ist bisher nicht geklärt durch welche konkreten Kontext und Aufgabenmerkmale diese hervorgerufen werden Darüber hinaus deuten die eher ambivalenten Ergebnisse bezüglich der Lernleistung von Schülerinnen und Schülern auf eine differentielle Wirkung unterschiedlich kontextualisierter Aufgaben hin Im Rahmen dieser Studie werden daher relevante Variablen kontextualisierter Lernaufgaben systematisch variiert um deren Einfluss auf affektive und kognitive Schülervariablen zu untersuchen Auf Grundlage der unabhängigen Variablen Kontextmerkmal Fachinhalt und Problemorientierung wurden experimentbasierte Lernaufgaben entwickelt die innerhalb eines pre-post Designs eingesetzt und evaluiert wurden Die Ergebnisse der Studie legen nahe dass die Wirkung von kontextualisierten Lernaufgaben auf das situationale Interesse von Schülerinnen und Schülern vom Kontextmerkmal abhängt diese Wirkung jedoch durch die Ausprägung von individuellen Fach und Sachinteressen moderiert wird Darüber hinaus werden höhere Lernleistungen erzielt wenn innerhalb von problemorientierten Kontextaufgaben gelernt wird und die kognitive Belastung

nicht zu hoch ausfällt *Konfliktvermeidung und Konfliktbeilegung in Gesellschaften ohne Zentralgewalt* Matthias Jung, 2024-04-11 Einer der neueren Trends in der Vor- und Frühgeschichtlichen Archäologie ist die Beschäftigung mit prähistorischen Konflikten. Zumeist beschränkt sich diese sogenannte Konfliktforschung jedoch auf eine bloße Gewaltforschung unter Vernachlässigung der Frage, was Konflikte als Konflikte eigentlich ausmacht und wie sie vermieden oder geregelt beigelegt werden können. Vor diesem Hintergrund verstehen sich die Beiträge in diesem Band als Theorieangebote an die Archäologie. Aus der Perspektive ihrer jeweiligen Disziplinen: Soziologie, Philosophie, Ethnologie, Archäologie, Geschichte und Politikwissenschaften, gehen die Autorinnen und Autoren den Fragen nach, wie sich in Gesellschaften ohne oder mit nur eingeschränkter Zentralgewalt Dynamiken negativer Reziprozität darstellen und wie sie sich beenden lassen, welche Rolle dritte Parteien oder Instanzen dabei spielen können und welche Bedeutung der materiellen Kultur im Kontext dieser Prozesse zukommt.

Die Evolution des Wissens Jürgen Renn, 2022-09-12 Die Evolution des Wissens erzählt in sechzehn Kapiteln die faszinierende Wissensgeschichte der Menschheit. Anhand von Schlüsselepisoden aus der Entwicklung von Wissenschaft und Technik, von der Erfindung der Schrift über die frühneuzeitliche wissenschaftliche Revolution bis hin zu Industrialisierung und Digitalisierung, analysiert Jürgen Renn, wie Wissen entsteht und sich verändert, wie es sich seit Jahrtausenden global verbreitet und auf welche Weise Wissensökonomien und die Gesellschaften, in die sie eingebettet sind, sich wechselseitig beeinflussen. Das enorm materialreiche und opulent bebilderte Buch entwickelt unter Einbeziehung einer Vielzahl von Methoden und Disziplinen einen völlig neuen Rahmen für das Verständnis der Wissenschaftsgeschichte als Teil jener kulturellen Evolution, die unserem Planeten ihren Stempel aufgedrückt hat. Der weite Blick zurück, den *Die Evolution des Wissens* wagt, schärft daher auch den Blick für die komplexen Herausforderungen, mit denen wir aktuell im Anthropozän konfrontiert sind.

Die Wellen des Lichts Hugh Aldersey-Williams, 2021-09-27 Die Wiederentdeckung eines vergessenen Genies: Wie der Niederländer Christian Huygens die Grundlagen der modernen Naturwissenschaft legte. Das 17. Jahrhundert war das Goldene Zeitalter für die Niederlande. Es zog Künstler und Geschichtsleute ebenso an wie Gelehrte und Naturforscher. Im Zentrum dieser intellektuellen Blüte stand ein Mann, dessen Schaffen seine Zeitgenossen in den Schatten stellte und der doch in Vergessenheit geraten ist: Christiaan Huygens, Erfinder von Teleskopen und der mechanischen Uhr, Entdecker des Saturnrings, Vater der Wellentheorie des Lichts. Bekannt von Descartes, Newton und Spinoza, Lehrer von Leibniz, und Erbe einer in ganz Europa bestens vernetzten Dynastie, zeichnet Hugh Aldersey-Williams ein schillerndes Porträt eines außerordentlichen Mannes und einer bewegten Epoche, ohne die die Welt heute eine andere wäre. Eine packende Geschichte über die vergessenen Wurzeln der modernen Naturwissenschaft.

Physics , The Routledge Handbook of Philosophy of Scientific Modeling Tarja Knuuttila, Natalia Carrillo, Rami Koskinen, 2024-09-05 Models and modeling have played an increasingly important role in philosophy going back to the nineteenth century. Empiricisms Barry Allen,2021 Empiricisms is about the value of experience and experiments Why do we esteem them and what is their contribution to knowledge The work is unique in the detail with which it explains empiricism from its beginning in ancient medicine to its emergence as a philosophy of modern science It elucidates the ideas of the so called radical empiricists clarifying their relation to historical empiricism and explaining what is radical about them and develops a comparison between European empiricism and ideas and practice in traditional China Bringing China into the argument is an unexpected innovation and makes the work a model for comparative philosophy

Constructing Quantum Mechanics Anthony Duncan,Michel Janssen,2019-08-29 Constructing Quantum Mechanics is the first of two volumes on the genesis of quantum mechanics This volume traces the early contributions by Planck Einstein and Bohr all showing the need for drastic changes to the physics of their day It examines the efforts by Sommerfeld and others to develop a new theory now known as the old quantum theory After some striking successes this theory ran into serious difficulties and ended up serving as the scaffold on which the arch of modern quantum mechanics was built This volume breaks new ground both in its treatment of the work of Sommerfeld and his associates and by offering new perspectives on classic papers by Planck Einstein Bohr and others Paying close attention to both primary and secondary sources Constructing Quantum Mechanics provides an in depth analysis of the heroic struggle to come to terms with the wealth of mostly spectroscopic data that eventually gave us modern quantum mechanics

God, the Multiverse, and Everything Rodney D. Holder, 2017-03-02 Modern cosmology tells us that the universe is remarkably fine tuned for life If the constants of physics or the initial conditions at the Big Bang were different by the smallest of margins then the universe would have been dull and lifeless Why should the universe be so accommodating to life Many cosmologists believe that the existence of many universes can explain why ours is so special In this book Rodney Holder subjects this multiverse hypothesis to rigorous philosophical critique A multitude of problems is exposed Going substantially further than existing treatments Holder argues that divine design is the best explanation for cosmic fine tuning specifically that design by God is a superior explanation in terms of both initial plausibility and explanatory power and is therefore the most rational position to take on the basis of the cosmological data

Modeling the Possible Tarja Knuuttila, Till Grüne-Yanoff, Rami Koskinen, Ylwa Sjölín Wirling, 2025-02-07 Models are used to explore possibilities across all scientific fields Climate models simulate the potential future climatic conditions under various emissions scenarios macroeconomic models investigate the implications of various fiscal and monetary policy initiatives and infectious diseases models study the spread of viral diseases under a range of conditions Such modeling approaches have not gone ignored by philosophers of science but they have only recently started to explicitly address modeling the possible So far the discussion has been spread across a variety of more or less isolated pockets of debate in the philosophy of science Modeling the Possible Perspectives from Philosophy of Science draws together these studies focusing specifically on how various modeling practices probe possibilities and justify claims concerning them The volume is divided into three sections plus an introductory chapter The introductory chapter provides a state of the art survey of the discussions of modeling possibilities within the philosophy of science as well as an introduction to the book's main themes and individual papers The three sections focus on different kinds of possibility concepts possibility spaces and how possibly modeling in practical situations The chapters contained in this volume address conceptual and theoretical issues while also presenting case studies from various scientific domains physics evolutionary and synthetic biology network science climate science economics and epidemiology Essential reading for philosophers of science epistemologists and modelers in various scientific disciplines Modeling the Possible is also suitable for anyone interested in model based scientific inferences their validity and the policy

conclusions derived from them **The Genesis of General Relativity** Jürgen Renn, 2007-02-16 This four volume work represents the most comprehensive documentation and study of the creation of general relativity Einstein's 1912 Zurich notebook is published for the first time in facsimile and transcript and commented on by today's major historians of science Additional sources from Einstein and others who from the late 19th to the early 20th century contributed to this monumental development are presented here in translation for the first time The volumes offer detailed commentaries and analyses of these sources that are based on a close reading of these documents supplemented by interpretations by the leading historians of relativity **Designing Communities** Wolff-Michael Roth, 2012-12-06 The study described in this book arose in the context of a three year collective effort to bring about change in science teaching at Mountain Elementary School 1 This opportunity emerged after I contacted the school with the idea to help teachers implement student centered science teaching At the same time the teachers collectively had come to realize that their science teaching was not as exciting to children as it could be They had recognized their own teaching as textbook based with little use of the hands on approaches prescribed by the provincial curriculum At this point the teachers and I decided that a joint project would serve our mutual goals they wanted assistance in changing from textbook based approaches to student centered activities I wanted to collect data on learning in student centered knowledge producing classroom communities I brought to this school my new understandings about classroom communities from several earlier studies conducted in a private high school e.g. Roth Roychoudhury 1992 I wanted to help teachers create science learning environments in which children took charge of their learning where children learned from more competent others by participating with them in ongoing activities and teachers were responsible for setting up and maintaining a classroom community rather than for disseminating information After I had completed the data collection for the present study I watched a documentary about an elementary school in the small French village of Moussac Envoyé Spécial TV5 September 14 1994 [The World of Science Education](#) , 2010-01-01 Each volume in the 7 volume series The World of Science Education reviews research in a key region of the world These regions include North America South and Latin America Asia Australia and New Zealand Europe and Israel Arab States and Sub Saharan Africa The focus of this Handbook is on science education in Asia and the scholarship that most closely supports this program The reviews of the research situate what has been accomplished within a given field in an Asian rather than an international context The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education The thrust lies in identifying the roots of research programs and sketching trajectories focusing the changing face of problems and solutions within regional contexts The approach allows readers to review what has been done and accomplished what is missing and what might be done next **International Handbook of Research on Conceptual Change** Stella Vosniadou, 2013-07-18 Conceptual change research investigates the processes through which learners substantially revise prior knowledge and acquire new concepts Tracing its heritage to paradigms and paradigm

shifts made famous by Thomas Kuhn conceptual change research focuses on understanding and explaining learning of the most the most difficult and counter intuitive concepts Now in its second edition the International Handbook of Research on Conceptual Change provides a comprehensive review of the conceptual change movement and of the impressive research it has spawned on students difficulties in learning In thirty one new and updated chapters organized thematically and introduced by Stella Vosniadou this volume brings together detailed discussions of key theoretical and methodological issues the roots of conceptual change research and mechanisms of conceptual change and learner characteristics Combined with chapters that describe conceptual change research in the fields of physics astronomy biology medicine and health and history this handbook presents writings on interdisciplinary topics written for researchers and students across fields
