Intelligent Data Analytics for Power and Energy Systems Hasmat Malik, Md. Waseem Ahmad, D.P. Kothari, 2022-02-17 This book brings together state of the art advances in intelligent data analytics as driver of the future evolution of PaE systems In the modern power and energy PaE domain the increasing penetration of renewable energy sources RES and the consequent empowerment of consumers as a central and active solution to deal with the generation and development variability are driving the PaE system towards a historic paradigm shift The small scale diversity and especially

the number of new players involved in the PaE system potentiate a significant growth of generated data Moreover advances in communication between IoT devices and M2M machine to machine man to machine etc and digitalization hugely increased the volume of data that results from PaE components installations and systems operation This data is becoming more and more important for PaE systems operation maintenance planning and scheduling with relevant impact on all involved entities from producers consumer s and aggregators to market and system operators However although the PaE community is fully aware of the intrinsic value of those data the methods to deal with it still necessitate substantial enhancements development and research Intelligent data analytics is thereby playing a fundamental role in this domain by enabling stakeholders to expand their decision making method and achieve the awareness on the PaE environment The editors also included demonstrated codes for presented problems for better understanding for beginners
