Laboratory Projects in Physics Frederick Foreman Good, 2015-06-26 Excerpt from Laboratory Projects in Physics A Manual of Practical Experiments for Beginners These experiments have been organized for the purpose of giving concrete expression in the field of physics to the recent tendencies in the teaching of science with respect to aim subject matter and method The physics course in a modern high school should be organized according to the recognized function of education in a democratic society It should include units of study which the masses of boys and girls of high school age are able to pursue with profit It should proceed toward an organization of practical situations activities and phenomena the value of which will be recognized and approved by teachers students parents administrators of education and others who are responsible for the work which boys and girls do in the high school It is intended that these experiments should form part of a physics course which includes class discussions and demonstrations They were devised and used for several years in a beginners course in practical physics They differ from the conventional physics laboratory experiments in that they deal more directly with the mechanisms and appliances of everyday experience The materials and procedure have been worked out in detail in order to aid the busy science teacher in the laborious task of placing practical laboratory study upon a workable basis A large list of projects and problems is offered In a year s course of thirty six to forty weeks perhaps not more than half of the ninety five experiments can be performed The complete list represents two years work unless more time is assigned to laboratory study than is the custom About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing

scientists hang out discovering even more things for me to learn in school Besides aren't all scientists guys with white coats and long gray beards who mutter things like $E=mc^2$ or Ah ha I've found the secret of living forever Well not exactly Scientists don't always work in laboratories don't necessarily wear white coats and don't talk like they were starring in a sci fi thriller There are some scientists with long gray beards usually they are older men Almost anyone can make scientific observations and do experiments even kids And anywhere that you make observations and perform experiments can be considered a science laboratory Entomologists scientists who study insects do most of their work in forests jungles and backyards Herpetologists scientists who study reptiles such as snakes and lizards hunt for their subjects where they live in wooded areas swamps and fields Some astronomers scientists who study planets stars galaxies and everything else in the cosmos setup telescopes in their backyards in parks or on mountaintops These scientists study in field laboratories and so can Your home can be your field laboratory Did you ever wonder how certain things in your home worked When I was a youngster lots of years ago when the only good music was rock and roll long before walkman type tape players and CDs I always wanted to know what made things work things like light switches refrigerators dish washers washing machines toilets sinks freezers door locks hinges vacuum cleaners coffee makers juicers windows and plumbing pipes After disassembling the easy part and reassembling the harder part lots of household stuff I learned that even the most complex of these items worked on some very basic principles All of them worked when I was able to put them back together properly because of science and applied science which is called technology Once I looked at the simple components that make these items work they were easy or at least easier to understand This book will show you how to perform experiments and observations at home and help you figure out where and how science is used in your home Scattered throughout these chapters you will find a safety symbol Ask an adult to help you wherever you see this symbol The symbol indicates that the experiment is a little bit dangerous or difficult I'd hate to see you get discouraged or hurt while you are learning about science in your home Throughout the book you'll also find words in italic type These words are defined in the glossary at the back of the book There are three other books in this series that explain how you can conduct scientific observations and experiments with material found in hardware stores housewares stores and supermarkets If you like this book and think your friends parents and teachers would like it the author's name is Bob Friedhoffer Go to the library and check out the books or even better go to the bookstore and buy them If you don't like this book don't tell anyone
