S., 2025-01-17 Agriculture is globally challenged by adverse environmental factors including drought heat waterlogging cold soil salinity and sodicity nutrient deficiency heavy metal contamination and other edaphic stresses These stresses impair plant functioning at multiple levels limiting plant development and crop productivity. In the current climate change scenario the increase in frequency and intensity of these stresses is posing a serious threat to overall food and nutrition security Plants respond to these stresses

through several tolerance mechanisms operating at molecular biochemical physiological or morpho anatomical levels depending on their developmental stage and type of species The cope up strategy also differs depending on abiotic stress type duration and intensity The extent to which these changes occur to counteract the impact of abiotic stresses as well as the pathways involved in plant acclimation is not fully understood An advance in understanding agricultural crops adaptation and tolerance mechanisms underlying trans generational effects epigenetic changes and stress memory will significantly help in comprehending the implications as well as devising mitigation strategies for sustainable agriculture and thus food security Additionally it is crucial to understand the interactions and impacts of combined stresses to efficiently advance the development of combined stress tolerant crops as well as devising mitigation strategies for various climatic stressors

Mechanisms of Environmental Stress Resistance in Plants Amarjit S. Basra, Ranjit K. Basra, 2022-02-26 Plant growth and productivity are limited in many areas of the world by a wide variety of environmental stresses This book discusses progress made toward the major goal of uncovering the plant resistance mechanisms to biotic and abiotic stresses the purpose being to utilise this knowledge in genetic modification of plants for achieving improved stress resistance This volume achieves a new synthesis in considering the mechanisms of resistance at various levels of organisation from individual cells and tissues through whole plants to communities Chapters are written by internationally acknowledged experts who have a wealth of research and teaching experience With comprehensive and up to date coverage this book analyses many outstanding problems and poses important questions for future research Biosynthesis and Manipulation of Plant Products Donald Grierson, 2012-12-06 Volumes I and 2 of this Plant Biotechnology series reviewed fundamental aspects of plant molecular biology and discussed production and analysis of the first generation of transgenic plants of potential use in agriculture and horticulture These included plants resistant to insects viruses and herbicides which were produced by adding genes from other organisms Realisation of the potential of plant breeding has led to a resurgence of interest in methods of altering the structure composition and function of plant constituents which represents an even greater challenge and offers scope for improving the quality of a wide range of agricultural products This in tum has resulted in a re evaluation of priorities and targets by industry Volume 3 of this series considers the biochemical and gentic basis of the biosynthesis of plant products such as starch lipids carotenoids and cell walls and evaluates the ways in which biosynthesis of these products can be modified for use in the food industries Authors also cover the biosynthesis of rare secondary products and the function and application of proteins for plant protection and therapeutic use The emphasis throughout is on the relationship between fundamen tal aspects of biosynthesis and structure function relationships and application of this knowledge to the redesigning and altering of plant products by molecular genetics Toxicity of Nanoparticles in Plants Vishnu D. Rajput, Tatiana Minkina, Svetlana Sushkova, Saglara S. Mandzhieva, Christopher Rensing, 2022-04-22 Toxicity of Nanoparticles in Plants An Evaluation of Cyto Morpho physiological Biochemical and Molecular Responses Volume Five in the Nanomaterial Plant Interactions series reviews the latest research on toxicological effects of using nanotechnology in plants Key themes include analyzing plant exposure to nanomaterials mechanisms of toxicity of nanoparticles to plants and effects uptake and translocation of various different nanoparticles. This will be an essential read for any scientist or researcher looking to assess and understand the potential toxicological risks associated with plant nanotechnology. To date nanotechnology is considered one of the most promising areas of research due to the widespread applications of nanomaterials in plant science and agriculture. However extensive use of nano based products raises concerns regarding their toxicity in crop plants their environmental impact and potential consequences to humans via the food chain Discusses environmental concerns raised by the extensive use of nanotechnology Highlights the impact of plants treated with nanoparticles on nutritional status. Reviews major challenges for assessing the toxicity of nanomaterials in plants
