thermal and energy performance of buildings studies must also consider the occupant's interactions with the built environment. The occupant behaviour influences the conditions of the internal environment through the occupation of indoor building spaces and through the interaction with building elements such as air conditioning, lighting, blinds and windows. *Occupant Behaviour in Buildings: Advances and Challenges* brings together reviews of these influential aspects, presenting updates on advances and questions that pose challenges in our current understanding of behavioural modeling and its application to building design. Special topics covered in the book include methods to survey occupant behavior, building design choices, occupant behaviour impact on a building's thermal and energy efficiency, and finally a simulation of occupants in a building.
