Nanoscale Zerovalent Iron Particles for Environmental Restoration Tanapon Phenrat, Gregory V. Lowry, 2019-01-31 This is the first complete edited volume devoted to providing comprehensive and state of the art descriptions of science principles and pilot and field scaled engineering applications of nanoscale zerovalent iron particles NZVI for soil and groundwater remediation Although several books on environmental nanotechnology contain chapters of NZVI for environmental remediation Wiesner and Bottero 2007 Geiger and Carvalho Knighton 2009 Diallo et al 2009 Ram et al 2011 none of them include a comprehensive treatment of the fundamental and applied aspects of NZVI applications Most devote a chapter or two discussing a contemporary aspect of NZVI In addition environmental nanotechnology has a broad audience including environmental engineers and scientists geochemists material scientists physicists chemists biologists ecologists and toxicologists None of the current books contain

enough background material for such multidisciplinary readers making it difficult for a graduate student or even an experienced researcher or environmental remediation practitioner new to nanotechnology to catch up with the massive undigested literature. This prohibits the reader from gaining a complete understanding of NZVI science and technology. In this volume, the sixteen chapters are based on more than two decades of laboratory research and development and field scaled demonstrations of NZVI implementation. The authors of each chapter are leading researchers and or practitioners in NZVI technology. This book aims to be an important resource for all levels of audiences i.e. graduate students, experienced environmental and nanotechnology researchers and practitioners evaluating environmental remediation as it is designed to involve everything from basic to advanced concepts.
