Regulation and Repair of Piano and Player Mechanism, Together with Tuning As Science and Art William Braid White, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1909 edition Excerpt Chapter II ON PIANO REPAIRING One of the most important of the piano tuner s duties is the repairing of old instruments Even today there are numberless old squares in the homes of people in moderate circumstances which are still capable of being made fit for many years of service and whose owners are unwilling or unable to afford the expense of new instruments The same statement may be made to apply with equal force to uprights and grands Everywhere the intelligent tuner finds pianos of every kind in a more or less wrecked condition pianos that are too good to be discarded and equally too good to be sacrificed in a trade for new instruments Such pianos are fair game for the good repairer who is often enabled to restore them to something like their pristine vigor and thus earn good fees and much gratitude from the owners The field for repairing is almost unlimited and there is no tuner with an independent practice but should regard the repairing branch as most important to his reputation and pocket Nevertheless it will be found that a knowledge of the essential principles of repairing is by no means as well developed or as evenly distributed among the tuners as it should be This lamentable state of affairs arises largely from the fact that the factory offers little encouragement to one who may desire a knowledge of the conditions surrounding the deterioration and decay of old instruments while the average wareroom is hardly much better off in this respect Speaking from experience it can be said that virtually nothing about repairing is to be learned in factories although the knowledge of practical action finishing regulating stringing and tone regulating there gained is of inestimable value But the restoration of

Regulation and Repair of Piano and Player Mechanism, Together with Tuning as Science and Art William Braid White, 2017-08-30 *Piano Tuning - Regulating and Repairing* J. Cree Fischer, 2017-03-29 From the PREFACE For some years past a lack of competent men in the profession of Piano Tuning has been generally acknowledged This may be accounted for as follows The immense popularity of the piano and the assiduous efforts of factories and salesmen have led to the result that nearly every well to do household is furnished with an instrument To supply this demand the annual production and sale for the year 1906 is estimated at three hundred thousand pianos in the United States These pianos must be tuned many times in the factory before they are shipped to the salesroom there they must be kept in tune until sold When finally they take up their permanent abode in the homes of the purchasers they should be given the attention of the tuner at least twice a year This means work for the tuner But this is not all Presuming that the average life of the piano is about fifty years it is evident that there exists in this country an accumulation of instruments variously estimated at from four to five millions This means more work for tuners While production and accumulation have been increasing there has been little if any effort made to provide tuners to look after the needs of this ever increasing number of instruments no provision for the thorough instruction of the learner of Piano Tuning outside the walls of the factories and of the few musical colleges where the art is taught Doubtless there are many persons who are by nature well adapted to this agreeable and profitable occupation persons who would make earnest effort to acquire the necessary skill and its honest application if they had a favorable opportunity Musical colleges in which tuning is taught are few and far between piano factories are built for the purpose of producing pianos and not tuners for mechanics and laborers and not for teachers and pupils furthermore very little fine tuning is done in the factory rough tuning is the bulk of the work there and a long apprenticeship in the factory with its meager advantages is rarely sufficient to meet the demands of the would be thorough tuner This may account in part for the fact that many who are incompetent are following this profession and that there is an increasing demand for tuners of skill In view of these facts the author came to the opinion that if a course of instruction were prepared which would demonstrate clearly the many abstruse details of the art in an interesting and comprehensible way it would be appreciated by those who are desirous to learn Acting upon this impulse he began the preparation of such a course The present book is the

outgrowth of a course of instruction used successfully with pupils from various parts of the United States and Canada conducted partly by correspondence partly at the school directed by the author Although it has been necessary to revise the course somewhat for publication in the present form no essential matter has been omitted and much has been added In preparing this course of study the utmost effort has been made to present the various topics in the clearest most comprehensive manner literary excellence being a secondary consideration
