*Using the Engineering Literature* Bonnie A. Osif, 2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links Higher Engineering Mathematics, 7th ed John Bird, 2014-04-11 A practical introduction to the core mathematics principles required at higher engineering level John Bird's approach to mathematics based on numerous worked examples and interactive problems is ideal for vocational students that require an advanced textbook Theory is kept to a minimum with the emphasis firmly placed on problem solving skills making this a thoroughly practical introduction to the advanced mathematics engineering that students need to master The extensive and thorough topic coverage makes this an ideal text for upper level vocational courses Now in its seventh edition Engineering Mathematics has helped thousands of students to succeed in their exams The new edition includes a section at the start of each chapter to explain why the content is important and how it relates to real life It is also supported by a fully updated companion website with resources for both students and lecturers It has full solutions to all 1900 further questions contained in the 269 practice exercises **Foundation Engineering Handbook** Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction *Analysis, Design and Construction of Foundations* Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2024-05-28 Analysis Design and Construction of Foundations covers the key concepts in the analysis and design of foundation systems balancing theory with engineering practice The book examines in depth the methods used for the analysis design and construction of shallow foundations deep foundations excavation and lateral support systems slope stability and stabilization and ground monitoring for proper site management Some new and innovative foundation construction methods are also introduced It is illustrated

with case studies of failures and defects from actual construction projects This second edition is extensively revised and developed to include a new chapter on numerical methods in geotechnical engineering as well as a large number of new construction drawings project photos and construction method statements from existing projects to give the book a stronger professional application and connection to engineering practice It also covers some new advanced theoretical concepts not covered in other texts making it useful in both the theoretical and practical aspects It is ideal for senior undergraduates and graduate students academics and consulting geotechnical engineers

*Databases for Data-Centric Geotechnics* Kok-Kwang Phoon, Chong Tang, 2024-12-20 *Databases for Data Centric Geotechnics* forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data driven methods This first volume pertains to site characterization The opening chapter presents an in depth analysis of site data attributes including the establishment of a new taxonomy of site data under 4S site generalizations spatial features sampling characteristics and smart data to provide a novel agenda for data driven site characterization Type 3 machine learning methods disruptive value are possible as sensors become more pervasive and more intelligent A comprehensive overview of site characterization information is also presented with a focus on its availability coverage value to decision making and challenges The remaining 13 chapters cover databases of soil and rock properties and the application of these databases to rock socket behavior rock classification settlement on soft marine clays permeability of fine grained soils and liquefaction among others The databases were compiled from studies undertaken in many countries including Austria Australia Brazil Canada China France Finland Germany India Iran Japan Korea Malaysia Mexico New Zealand Norway Singapore Sweden Thailand the United Kingdom and the United States This volume on site characterization is a companion to the volume on geotechnical structures *Databases for Data Centric Geotechnics* represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date It follows from *Model Uncertainties for Foundation Design* also published by CRC Press and suits specialist geotechnical engineers researchers and graduate students
