Geotechnical Engineering for the Preservation of Monuments and Historic Sites III Renato Lancellotta,Carlo Viggiani,Alessandro Flora,Filomena de Silva,Lucia Mele,2022-06-15 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization It involves in inextricable patterns factors belonging to different fields cultural humanistic social

technical economical administrative and the requirements of safety and use appear to be or often are in conflict with the respect of the integrity of the monuments The complexity of the topic is such that a shared framework of reference is still lacking among art historians architects structural and geotechnical engineers The complexity of the subject is such that a shared frame of reference is still lacking among art historians architects architectural and geotechnical engineers And while there are exemplary cases of an integral approach to each building element with its static and architectural function as a material witness to the culture and construction techniques of the original historical period there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones preserving only the iconic look of the original monument Geotechnical Engineering for the Preservation of Monuments and Historic Sites III collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium Naples Italy 22-24 June 2022 The papers cover a wide range of topics which include Principles of conservation maintenance strategies case histories The knowledge investigations and monitoring Seismic risk site effects soil structure interaction Effects of urban development and tunnelling on built heritage Preservation of diffuse heritage soil instability subsidence environmental damages The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide

Intermediate Offshore Foundations Steve Kay, Susan Gourvenec, Elisabeth Palix, Etienne Alderlieste, 2021-06-20 Intermediate foundations are used as anchors for floating platforms and ancillary structures foundations for steel jackets and to support seafloor equipment and offshore wind turbines When installed by suction they are an economical alternative to piling and also may be completely removed They are usually circular in plan and are essentially rigid when laterally loaded Length to diameter embedment ratios L/D generally vary between 0.5 and 1.0 spanning the gap between shallow and deep foundations although these are indicative boundaries and the response rather than the embedment ratio defines an intermediate foundation The first chapters introduce foundation types compare shallow intermediate and deep foundation models and design define unique design issues that make intermediate foundations distinct from shallow and deep foundations as well as list their hazards that mainly occur during installation Later chapters cover installation in place resistance and in place response and miscellaneous design considerations There is no general agreement as to which design methods models are appropriate so models should only be as accurate as the data Therefore several reasonably accurate models are provided together with comprehensive discussion and advice Example calculations and over 200 references are also included This is the first book dedicated to the geotechnical design of intermediate foundations and it will appeal to professional engineers specialising in the offshore industry
