

Assignment #1: Mendelian Genetics

This assignment is affiliated with the "Assignment #1: Mendelian Genetics" quiz on the folio course page. Complete the following problems before attempting the quiz as you will only have one attempt at the quiz and there will be a 25 minute time limit. The answers to these questions, questions concerning methodology, along with 1-2 new problems (with similar mechanisms to solving those problems) are all potential quiz questions. You must complete the quiz prior to midnight Sunday, Aug. 26.

- 1a) The summer squash has a white fruit color which is dominant over yellow fruit color. If a white fruit homozygous plant is crossed with a homozygous yellow fruit plant, what will the genotype of the first generation (F_1)?

C = White coloring; c = Yellow coloring
CC crossed with cc

| | | |
|---|----|----|
| | C | C |
| c | Cc | Cc |
| c | Cc | Cc |

The genotypes of the F_1 generation will all be heterozygous (Cc).

- 1b) If the individuals from the F_1 generation were allowed to fertilize one another, what is the expected genotypic and phenotypic ratios?

All F_1 generation must be Cc

| | | |
|---|----|----|
| | C | c |
| C | CC | Cc |
| c | Cc | cc |

The expected genotypic ratio would be 1:2:1 while the phenotypic ratio would be 3:1

- 2a) In the high pressure, deep, dark depths of the ocean's abyssal plains lives an organism called a viper fish. These fish resemble transparent eels with overlarge heads and very long, pointy teeth. Some of these fish can produce biochemical luminescence along the length of their bodies and some cannot. Also, some have very large eyes while others have almost no eyes at all. Assume that these two traits are each controlled by single separate genes with the production of bioluminescence (L) and large eyes (E) being dominant alleles for those traits. A female fish heterozygous for both traits happens to meet a male that is homozygous dominant for bioluminescence and homozygous recessive for eyes. List all the possible genotypes of their offspring.

Possible genotypes: LLEe, LLee, LLEe, LLeE

- 2b) What are the odds that any progeny will be bioluminescent with no eyes?

Mother = LLEe

Father = LLee

| | | | | |
|----|------|------|------|------|
| | LE | Le | LE | Le |
| Le | LLLe | LLee | LLLe | LLee |
| Le | LLLe | LLee | LLLe | LLee |
| Le | LLLe | LLee | LLLe | LLee |
| Le | LLLe | LLee | LLLe | LLee |

Bioluminescent along length of their bodies and no eyes (LLLe or LLee) = 50%

Gail Patt, Anita Bennett, 1994 **Reasoning in Biological Discoveries** Lindley Darden, 2006-06-26 Reasoning in Biological Discoveries brings together a series of essays which focus on one of the most heavily debated topics of scientific discovery Collected together and richly illustrated Darden's essays represent a groundbreaking foray into one of the major problems facing scientists and philosophers of science Divided into three sections the essays focus on broad themes notably historical and philosophical issues at play in discussions of biological mechanism and the problem of developing and refining reasoning strategies including interfield relations and anomaly resolution Darden summarizes the philosophy of discovery and elaborates on the role that mechanisms play in biological discovery Throughout the book she uses historical case studies to extract advisory reasoning strategies for discovery Examples in genetics molecular biology biochemistry immunology neuroscience and evolutionary biology reveal the process of discovery in action Primer of Genetic Analysis James N. inhibitor is a major regulator of the transition between each phase of the cell cycle 7 Previous studies have noted that CDK inhibitor p27 plays an important role in the inhibition of the CDK activity and proliferation in vascular smooth muscle cells 2 3 The G1 phase in severe hypoxia is suggested to involve the CKI p27 because the expression of p27 increased in several cell lines when they were exposed to extreme hypoxia 20 5 Previous reports indicate that hypoxia decreases the p27 expression in the murine lung 23 24 and we found that PGI2 suppresses hypox induced proliferation of PASMC and maintains p27 in PASMC 20

Primer of Genetic Analysis James N. Thompson, Jr, Jenna J. Hellack, Gerald Braver, David S. Durica, 2007-10-01 An invaluable student tested study aid this primer first published in 2007 provides guided instruction for the analysis and interpretation of genetic principles and practice in problem solving Each section is introduced with a summary of useful hints for problem solving and an overview of the topic with key terms A series of problems generally progressing from simple to more complex then allows students to test their understanding of the material Each question and answer is accompanied by detailed explanation This third edition includes additional problems in basic areas that often challenge students extended coverage in molecular biology and development an expanded glossary of terms and updated historical landmarks Students at all levels from beginning biologists and premedical students to graduates seeking a review of basic genetics will find this book a valuable aid It will complement the formal presentation in any genetics textbook or stand alone as a self paced review manual

Theory Change in Science Lindley Darden, 1991-09-12 This challenging and innovative book examines the processes involved in the birth and development of new scientific ideas The author has searched for strategies used by scientists for producing new theories both those that yield a range of plausible hypotheses and ones that aid in narrowing that range She goes on to focus on the development of the theory of the gene as a case study in scientific creativity Her discussion of modern genetics greatly demystifies the philosophy of science and establishes a realistic framework for understanding how scientists actually go about their work This compelling work will interest a broad range of readers including biologists and geneticists along with historians and philosophers of science

J. Cassiman, 2010-06-25 Initially genetic disorders were all considered as rare diseases At present in the mid of 2009 the OMIM catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect However altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution Adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder

Further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person. Thus genetic disorders are not rare. Measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems. In many countries national authorities started to implement recommendations, guidelines or legal procedures regulating quality of health care delivery. In laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use. With the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process. As many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred. While international quality criteria ISO have been in existence for a number of years the regulation of quality issues still may differ between countries. Based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of this book share their experience and give examples of the implementation of quality issues in national quality systems worldwide. This book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors, health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders.
